Transforming the “Strategies” into measurable “actions” will require metamorphosis of KVDA into a “center of excellence” institution, recognized as an authoritative agency with strong technical competency, supporting infrastructure, financial resources, and visionary leadership and with a support of efficient administrative and dynamic advisory teams. The implementation of 20 Years SDMP will require:

1. Supportive Legislative and Legal Framework
2. Land Management and Reform: Articulating a move from 3D to 3C
3. Institutional Re-structuring and Capacity Building
4. Financing SDMP
5. Coordination and Collaboration
6. Research and Innovative use of Technology

7.1 SUPPORTIVE LEGISLATIVE, LEGAL AND REGULATORY FRAMEWORK

Nepal has stride a long way forward in terms of national re-structuring with promulgation of ‘Federated States’ in the “Constitution of Nepal 2072”, albeit various socio-political issues are yet to be resolved. The Cabinet decision and declaration of 72 new municipalities on 8th May 2014, 61 new municipalities on 2nd December 2014 and additional 26 new municipalities on 18th September 2015 reflects GoN’s policy to prioritize urban development. At present, there are 217 municipalities, of which 22 municipalities (inhabited by 2,468,316 population, i.e. 22% of the total urban population of the country) are within Kathmandu Valley under the planning jurisdiction of the KVDA. In recent years, GoN has prioritized its policies and plans for integrated development in KV as the national capital region.

The current legislative and legal documents, including the new “Constitution of Nepal 2072”, have made various provisions and guidelines, which unequivocally authorize KVDA, as an apex planning body for KV, to execute SDMP programs by avoiding any legal contentions. Annual fiscal budgets and plans have also prioritized development programs in KV, which convey provision of finances for integrated development of KV. Under the following sub-sections, enabling legislative provisions are discussed which present a firm ground for SDMP to be implemented.

7.1.1 Constitutional Recognition for Urban Development

The “Constitution of Nepal 2072” has chartered legislative clauses supportive of the vision and mission of the SDMP 2015-2035 and has enabled its implementation.

Fundamental Rights

The Part 3 of the “Constitution of Nepal 2072”, proponents the “*Fundamental Rights and Duties*” of the citizens of Nepal and includes right to clean living environment¹, right to clean drinking

¹ Constitution of Nepal 2072, Part 3 Clause 30 (2)

water¹ and shelter for all². The Part 4, proponents “Directive Principles, Policies and Responsibilities of the State” guarantees all round human safety and security³.

The KVDA’s SDMP translates “the fundamental rights of the citizens of Nepal” and “the directive principles, policies and responsibilities of the State” as its vision “To establish Kathmandu Valley as a Safe, Clean, Organized, Prosperous and Elegant (SCOPE) National Capital”. SDMP envisions to ensure these fundamental constitutional rights of the citizens of Kathmandu Valley, thus by taking the responsibility to establish KV as a Safe, Clean, Organized, Prosperous and Elegant national capital region.

Policies regarding the basic needs of citizens

The new “Constitution of Nepal 2072”, under its Part 4 Clause 51 State Policies (h) regarding the basic needs of citizens has stipulated the following under its

Sub-Clause (11): Developing well-planned and organized settlement areas by managing the unplanned settlements.

Sub-Clause (14): Increasing investment in the transportation sector by ensuring simple, easy and equal access of all citizens to transportation facilities, and prioritizing environment friendly technology, encouraging public transportation and quality private transportation, while also making the transportation sector safe, well managed and differently-abled friendly.

These constitutional policy directives mandate KVDA, as an apex planning and development authority for KV, to undertake development of planned settlement and transportation sector. The SDMP, under the proposed Strategies 1, 2 and 3 attempts to address the directives under “Constitution of Nepal 2072” Clause 51 h (11) and (14).

Property Rights

The previous “Constitutions of Nepal 2045” have been rigid in terms of *Property Rights*, which also includes ‘land’ as a property, provisioning an exclusive right of citizens to acquire, own, utilize and sell as subjected to the law. The “Interim Constitution 2063” has made changes by provisioning acquisition of land by the state in favor of public interest under its Clause 19 (2). The Clause 19 (3) also stipulates that State can acquire citizen’s property for scientific land reform or in public interest, provided lawful compensation is provisioned. This exclusive right to ‘land’ as a property, limited and ambiguous definitions of “land reform” and “public interest” has curtailed the legal basis for authorities to acquire or provision land for housing and urban development, especially for land use planning.

The new “Constitution of Nepal 2072”, is progressive in addressing the issue of urban development and has stipulated under its Part 3 Clause 25 (4) that “the provisions of Clauses (2) and (3) shall not obstruct the state in carrying out any land reforms, management and regulation by law in order to

¹ Constitution of Nepal 2072, Part 3, Clause 35 (4)

² Constitution of Nepal 2072, Part 3, Clause 37 (1)

³ Constitution of Nepal 2072, Part 4, Clause 51 a (4)

increase the production and productivity of land, modernize agriculture and make it professional, for **environment protection and managed housing and urban development**¹.

This explicit provision for “environment protection and managed housing and urban development” provide legal basis for KVDA and authorities to acquire/requisite necessary land through due process and appropriate compensation for implementation of SDMP.

7.1.2 Budgetary Provisions, Annual Plans and Policies for Urban Development

The Government of Nepal has given emphasis on urban sector in its periodic plans and also included themes like disaster management and climate change in the Five-year plans. The 8th Periodic Plan has further expanded to include management of peri-urban areas, urban road infrastructure and production and distribution of urban energy. It underscores alignment of development activities for retaining Kathmandu Valley as a cultural and heritage hub. For this purpose, the budgetary initiative by the government (budget speech of 2071/72 and 2072/73) has given emphasis on urban development through strategic investment. SDMP 2015-2035 has been developed as a framework and twenty years’ roadmap for such strategic integrated development of the KV, which apparently needs to be incorporated specifically in the forthcoming annual fiscal budgets and plans.

The excerpts of the Budget Speech for the F/Y 2071/72 and 2072/73 and Annual Plans pertaining to KV and KVDA’s roles are presented hereunder, highlighting prioritization of urban sector development in Kathmandu Valley.

Budget Speech for F/Y 2071/72

The budget speech of 2071/72 recognizes ‘urbanization’ as a major challenge and states that ‘rapid urbanization has not been supported by minimum infrastructure’. It is because of the scattered settlement in Hills and Mountains, the cost of infrastructure construction and service delivery has increased and some of the settlements are at ‘risk’. It has also allocated budget for urban infrastructure development, disaster management and for improving the physical and social environment of the urban areas.

The budget speech of 2071/72 has recognized Kathmandu Valley Development Authority (KVDA) as the main urban development partner for holistic development of Kathmandu Valley and any physical development inside Kathmandu Valley would require recommendation and consent from KVDA. The budget speech in its Clause No. 130 states

“Development works within Kathmandu Valley will be undertaken in an integrated and coordinated manner. Any and all development related activities including road widening shall only be undertaken after the recommendation of Kathmandu Valley Development Authority (KVDA) and through endorsement of Physical Development Committee (PDC).”

This clause has recognized necessity of coordinated effort for integrated development of KV and has also duly recognized KVDA as the apex coordinating authority for such an integrated development.

¹ Constitution of Nepal 2072, Part 3 Clause 25 (4)

Budget Speech for F/Y 2072/73

The budget speech of F/Y 2072/73 has specifically emphasized Kathmandu Valley as the “National Capital City” and has stated in its Clause 96 (official translation)

“After the conversion of the country into federal structure, it will be imperative to develop Kathmandu Valley into National Capital Region. Thus, development of Kathmandu Valley will be undertaken in a single package. The activities outlined in the master plan prepared for integrated development of Kathmandu Valley shall be gradually implemented to fulfill the objective.”

This clause emphasizes integrated development of Kathmandu Valley, recognized as the National Capital City of the Federal Nepal; and such integrated development will be implemented through program packages as identified by the Strategic Development Master Plan. As such, this SDMP is legally recognized as the master plan for the integrated development of KV. The strategies and its programs are the necessary development packages.

7.1.3 International Conventions and Urban Development

The Government of Nepal has participated in many International Conventions and Conferences and has made commitments to adopt the objectives of such programs in their development agenda. The SDMP has taken due consideration of these international conventions and has addressed in its strategies through defining specific objectives and their action plans that directly or indirectly contributes to the ratified commitments made internationally. Some of the major conferences where Nepal had been a signatory are listed below:

- The Government of Nepal, under the leadership of the Ministry of Science, Technology and Environment (MoSTE) participated in the **Convention of Parties, COP 21**, held in Paris from 30th November to 11th December 2015. Nepal formulated its climate change policy in 2011 and in COP21, Nepal stressed on taking necessary measures to cut down the emission of greenhouse gas (GHG) before 2020 and also to keep the global warming below 2 degree Celsius.

Urban Green House Gas Emissions (GHG) are influenced by variety of factors such as economic geography subjected to urban population dynamics, urban energy consumptions, urban renewables, transport, urban infrastructure and urban form (Seto et al., 2014). SDMP envisions to curb GHG in KV through integrated planned and development, land use regulations and smart growth, introduction of mass rapid transit and less emission vehicles, promotion of environment friendly (green) building, designation of special forest areas, increase of urban greenery and promotions of renewable energy sources at household levels.

- Nepal, as a UN member nation and also member of the Open Working Group on Sustainable Development Goals; participated in the UN Sustainable Development Summit held in New York on 25th September, 2015. Nepal was signatory to the SDG and committed to 17 goals to achieve 3 extraordinary things in next 15 years: End Extreme Poverty, Fight Inequality and Injustice, Fix Climate Change.

SDMP’s strategies and objectives are aligned to attain SDG Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable.

- Nepal adopted the **SENDAI Framework for the Disaster Risk Reduction 2015 – 2030** on 18th March, 2015 at the Third UN Conference on Disaster Risk Reduction held in Japan and Nepal is going to be the first UN member to implement the DRR in its development agenda with focus on “Building Back Better” and enhanced disaster risk governance.

SDMP is geared to integrate DRR strategies in all of its development program with overarching vision of establishing Kathmandu Valley as a Safe, Clean, Organized, Prosperous and Elegant (SCOPE) National

- Nepal, under the leadership of Ministry of Housing and Physical Planning formed a working group for participating in the Habitat II conference held in Istanbul in 1996. Nepal has fully committed to the goals of “shelter for all” and “sustainable human settlements in the urbanizing world”, which is also reflected in the National Shelter Policy, 2007.

These goals are translated into SDMP’s objectives of “safe shelter” and “resilient infrastructure and safe and risk resilient urban areas”.

7.1.4 National Acts and Regulatory Frameworks

As per the constitutional provisions, Kathmandu Valley Development Authority is an entity under the Central Government. The primary act that gives authority to KVDA for sustainable urban development of the Valley is Kathmandu Valley Development Authority Act 1988. However, this Act became effective only in 2012, while other authorities or agencies had already come into existence and had started functioning independently in the sector of urban infrastructure and services.

The policy, regulatory and legal environment is backbone for successful implementation of the 20 years Strategic Development Master Plan (2015 – 2035). Thus, in order for KVDA to move ahead with its responsibility, SDMP has analyzed existing legal, policy and regulatory regime that are supportive or overlapping in order to make SDMP (2015- 2035) an open, collaborative and participatory document. Therefore, considering the importance of policy, regulatory and legal environment, the KVDA has analyzed existing laws to identify supportive or overlapping role, if there are any. Upon examination of the existing legal documents, the following laws and acts and other legal arrangements have been found still relevant and helpful to implement KVDA's Strategic Development Master Plan:

- | | |
|------------------------------------------------------------------------------------|---------------------------------------------|
| ▪ Building Act, 2045 | ▪ Land Registration Act, 2034 |
| ▪ Building Bylaws, 2066 | ▪ Land Related Act, 2021 |
| ▪ Construction Business Act, 2054 | ▪ Local Self-Governance Act, 2045 |
| ▪ Construction Business Bylaws, 2056 | ▪ Local Self-Governance Bylaws, 2056 |
| ▪ Construction Code for the municipalities and Urbanizing VDCs in the Valley, 2064 | ▪ Natural Disaster (Rescue) Act, 2039 |
| ▪ Consumer Protection Act, 2054 | ▪ Nepal Academy Act, 2064 |
| ▪ Decisions of Guided Land Development Program, 2045 | ▪ Nepal Engineering Council Act, 2055 |
| ▪ Environment Conservation Act, 2053 | ▪ Nepal Public Aviation Authority Act, 2053 |
| ▪ Forest Act, 2049 | ▪ Nepal Trust Act, 2064 |
| ▪ Guthi Corporation Act, 2033 | ▪ Old Monument conservation Act, 2049 |
| ▪ Industrial Business Act, 2049 | ▪ Pashupati Development Fund Act, 2044 |

- Joint Housing Ownership Related Act, 2054
- Joint Housing Ownership Related Bylaws, 2060
- KVDA Act, 2045
- KVDA Bylaws, 2068
- Private Investment in Infrastructure Development and Operation Act, 2063
- Town Development Act, 2045
- Ancient Monument Preservation Act, 2013 (1956)
- Ancient Monument Preservation Rules, 2046 (1989)
- Land Measurement Act, 2019
- Land Acquisition Act, 2034
- Property Tax Act, 2047
- Public Road Act, 2031
- Road Board Act, 2058
- Private Investment in Infrastructure Development and Operation Bylaws, 2064
- High Powered Committee for Integrated Development of the Bagmati Civilization
- TDF Act, 2053

Although all of the above Acts are supportive in implementation of KVDA's plan and programs, there are some overlapping between the mandates of the KVDA and the municipalities in the valley particularly in land use, physical development, and building demolition as these two roles are separately stated in the KVDA Act and Local Self-Governance Act. Therefore, these overlapping have to be clarified and sole authority should be given to the KVDA for planning, development, regulating and monitoring. Implementation of such plans needs to be done at the two levels with major and inter-municipal interventions undertaken by the KVDA and local municipal level implementation actions undertaken by the respective municipal authority with close coordination and monitoring of the KVDA. KVDA should provide technical assistance and/or advisory support to the municipal authorities

7.1.5 Political Commitment

The very recognition of Kathmandu Valley as a single ecological planning unit through the KVDA Act 2045, and the Policies and Programs of the Government of Nepal for the Fiscal Year 2071-72 are clear testimonies of direction that the GoN and the present Constituent Assembly Members for KV wish to take with respect to the Kathmandu Valley. The Policies and Programs of the Government of Nepal for the Fiscal Year 2071-72 also emphasized on the role of KVDA for the integrated urban development of Kathmandu Valley through integrated land management, strategic development plans and management of open spaces. Further, the manifestos of mainstream political parties' (in the both Constituency Assembly elections) support KVDA's mandates and recognize its authority as the sole entity for planning and development of KV, which strengthen political support and add weight into the mandates of the KVDA.

7.2 Land Management: Articulating a move from 3D to 3C

Land supply is a key issue contributing to development of urban infrastructure and services. In the context of Kathmandu Valley, as depicted by the Urban Growth Trend Study and Development constraint analysis, land is both scarce and valuable for development. Hence, accelerating Land Management through wider stakeholder participation is fundamental to achieve a planned development. This is the only tool widely practiced in other countries, to some degree in Kathmandu Valley as well, to ensure constitutionally enshrined internationally advocated fundamental principle of citizen's "safety, liberty and property" – in short as well as long term. It is only through the proper management of this single natural resource, be it in private or public domain that a move from current situation of Kathmandu Valley's "Distant, Dispersed and Disconnected" [3D] pattern of unplanned and sprawled settlement to planned "Compact, Connected and Coordinated" [3C] development. 3C is fundamental to achieving KVDA's mission for Kathmandu Valley: a Safe, Clean, Organized, Prosperous and Elegant Kathmandu Valley. The concept of 3D or the sprawled development highlights the increase in per capita land consumption along with the increase in distance between homes, businesses and services, which raises the cost of providing public infrastructure and services. Hence, efficient usage of land has been emphasized as an important basis for accelerating and optimizing investment in infrastructure as well as for the effective implementation of the 20 years Strategic Development Master Plan 2015-2035.

In order to change the current situation of Distant, Dispersed and Disconnected Settlement within KV to a Compact, Connected, and Coordinated Settlement (from 3D to 3C), there is a need to focus on Land Banking for development, with connectivity to Transport and Disaster Resilience. To build a sustainable city it is crucial to reintroduce the old principles of city planning - "compact, connected and coordinated" (3C). Cities that implement this idea have high density, mixed use area; where places are not only in proximity, but also accessible and less demanding to the environment. These cities have a sense of place; offer greater security, more street life and better access to open space. Such type of land management is more preferable to create public assets through outright purchase of land parcels, thereby increasing the opportunity for the development of urban infrastructures. However, such practice also requires protected negotiation, large investment, consensus among company and landowners and is likely to cause displacement and associated socio-cultural economic consequences in the long run. In addition to land banking for housing, introduction of inheritance tax may create open spaces. Moreover, urban infrastructure and services, there is an urgent need for preserving public lands for pre and post disaster needs and utilization of such areas as urban parks.

Land Pooling is being practiced as an important tool for land management as it provides an effective and sound model for participatory development of urban areas. According to a study, the public asset creation due to the completed Land Pooling projects and in Guided Land Development in Kathmandu Valley is worth about NRs. 1,21,78 crores¹(Neupane, 2015). Land Pooling Policy emphasizes on increased participation of landowners, who surrender their land holding to concerned development authorities and be a stakeholder to the development proposed on their land; along with the involvement of the Private sector as a catalyst for urban development. The concerned authority develops the land surrendered by landowners for the implementation of the Master Plan. Irrespective of the land use assigned to their land, each landowner would get an equitable return (40- 60% of the total land) on their pooled land, thus, ensuring no displacement. In context of Delhi Development Authority, it retains 40- 60% of the total land area from the

¹Cost of Land Rs. 2 crore per ropani—Completed Landpooling projects: NRs.3,428crore; Ongoing Land Pooling projects: NRs.3,658 crores; Guided Land Development projects: NRs.5,092 crores

landowners to develop infrastructures and amenities, along with sales plots to compensate the incurred infrastructure cost (Kshirsagar, 2013). Likewise, Ahmedabad Urban Development Authority returns 68% of land to the owners and the remaining 32% is used for providing necessary infrastructures and amenities, as well as to generate affordable housing and land plots for sale (Sanyal & Deuskar, 2012).

In context of KV, the land pooling process has been relatively less effective due to lesser percentage (25-33% of total land) of land retention for infrastructure development and sales plot. Hence, the Land Pooling Regulation is proposed to be modified so that the authorities could retain at least 40 – 50% of the total area. This would further aid to develop infrastructure and build sales plots as well, thus, ultimately resulting in increase in Land Value. In order to facilitate land management for development, present regulation for land development practices such as the present Land Pooling Regulation will be modified to encourage the financial participation from Government as well as Public and private sectors.

Present land pooling process practiced in KV since last 1.5 decades has been able to produce approximately 5723 ropanis of planned urban settlement with the provision of physical infrastructure benefitting limited households directly. KV has only 34.8% of constraint free area for further planned development. Hence, Land pooling would be implemented in massive scale, with wider participation of stakeholders so that these new settlements can act as interconnected but independent satellite townships that are Earthquake Resistant and Green. Within this context, KVDA will develop a win-win framework to materialize this concept, which will remove present source crunch by creating space for wider range of stakeholder participation to yield larger land assembly for other social, institutional and business infrastructure. The current successful practice and mechanism of land pooling for managed settlement will be extended for agriculture land pooling, commercial land pooling and industrial land pooling, thereby promoting urban agriculture, development of planned commercial zones and specialized environmental friendly industrial zones. These land-pooling mechanisms will also facilitate funding for KVDA and its various other programs. Special attention will be given to land needed for major infrastructure planned in the KV such as Melamchi Water Supply, Fast Track Road Network and others, which will require considerable land areas for various infrastructures. Serviced land will also be required within KV for the Federal States' offices (especially liaison and central offices for the representatives), which KVDA can facilitate through land pooling mechanism.

7.3 INSTITUTIONAL RE-STRUCTURING AND CAPACITY BUILDING

Institutional development and capacity building of KVDA is a pre-requisite for successful and sustainable implementation of the 20 years Strategic Development Master Plan of the Kathmandu Valley in addition to the wider range of consultation to develop an implementable Master Plan. KVDA, established as per the Kathmandu Valley Development Authority Act 1988 has the major task to prepare and implement a strategic development plan for the entire Valley that will provide a basis for other local bodies to conduct local level planning in a coordinated and comprehensive manner. In order to prepare and implement an integrated Kathmandu Valley Development Plan, KVDA is responsible to act as Valley Planning Commission and is in the process of strengthening its coordination mechanism to coordinate with all the relevant government and non-government stakeholders, including government administrative agencies, utility agencies, local municipalities and VDCs, NGOs and INGOs. Emphasis on the role of KVDA as a Valley Planning Commission is, thus,

highly important for both –effective implementation of 20 years SDMP and to upgrade the safety of life, liberty and property of the population of the Kathmandu Valley.

7.3.1 Current Implementation Structure

The KVDA is governed by the Kathmandu Valley Physical Development Committee (PDC) (Figure 7.3), chaired by the Honorable Minister of Urban Development, with members consisting of four other ministers and nine secretaries of the Government of Nepal, Chief Executive Officers of five municipalities and Chairpersons of three DDCs¹. The Development Commissioner of KVDA serves as the Member Secretary of the Committee and Chief Executive Officer of KVDA. The role of the PDC has been influential to inform and coordinate policies at highest level of agencies involved in the development of Kathmandu Valley. However, in the present context, PDC needs to play a proactive role in coordinating the policies across several agencies and in integrating the undertaking of the development of urban infrastructure, along with socio-economic development for the Kathmandu Valley. The Budget speech 071/072 (2014-2015 A.D.) has also stressed the responsibility of PDC in assessing and reviewing all aspects of urban development (Physical, Economical, Environmental and Social) within the Kathmandu Valley.

In addition to the PDC, there is also a high-level management committee with the structure as shown in Figure 7.4. In order to boost up the function of the KVDA, the Ministry of Finance has approved a total number of 137 positions for KVDA². The current organizational structure is shown in Figure 7.5.

¹The governing body of the KVDA, PDC, has established a process of inviting Constituent Assembly Members of KV- on issues and location basis - in the PDC meeting. A permanent arrangement to invite selected CA members will be made when the KVDA act is revised to make sure that the people's representatives from the valley take part in the permanent mechanism for policy guidance.

²Approved on 2070/04/23 on the basis of recommendations made by the Physical Development Committee Meeting held on 2069/09/08

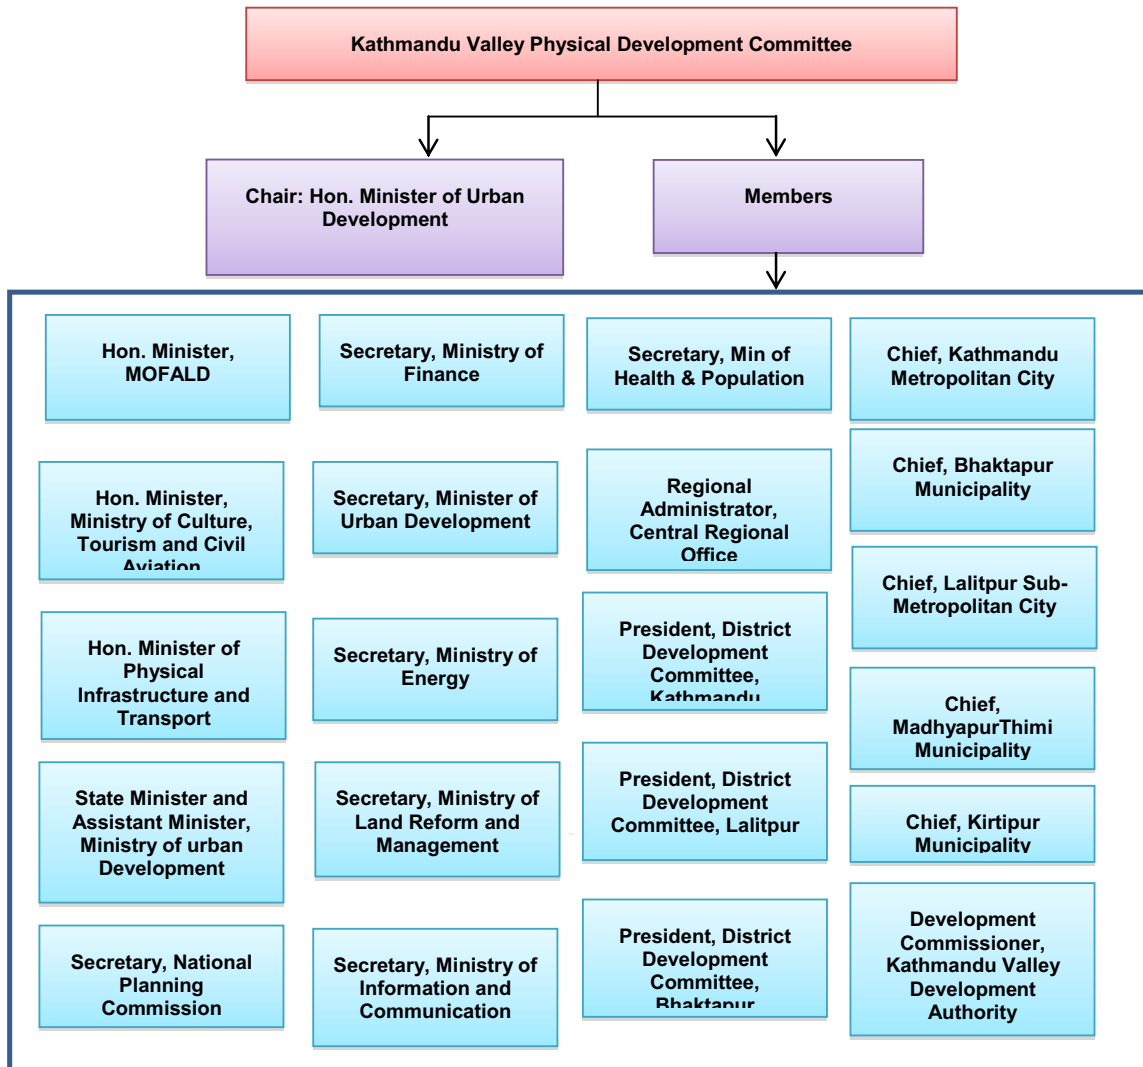

Figure 7-3 Structure of the Kathmandu Valley Physical Development Committee, the Governing body of KVDA

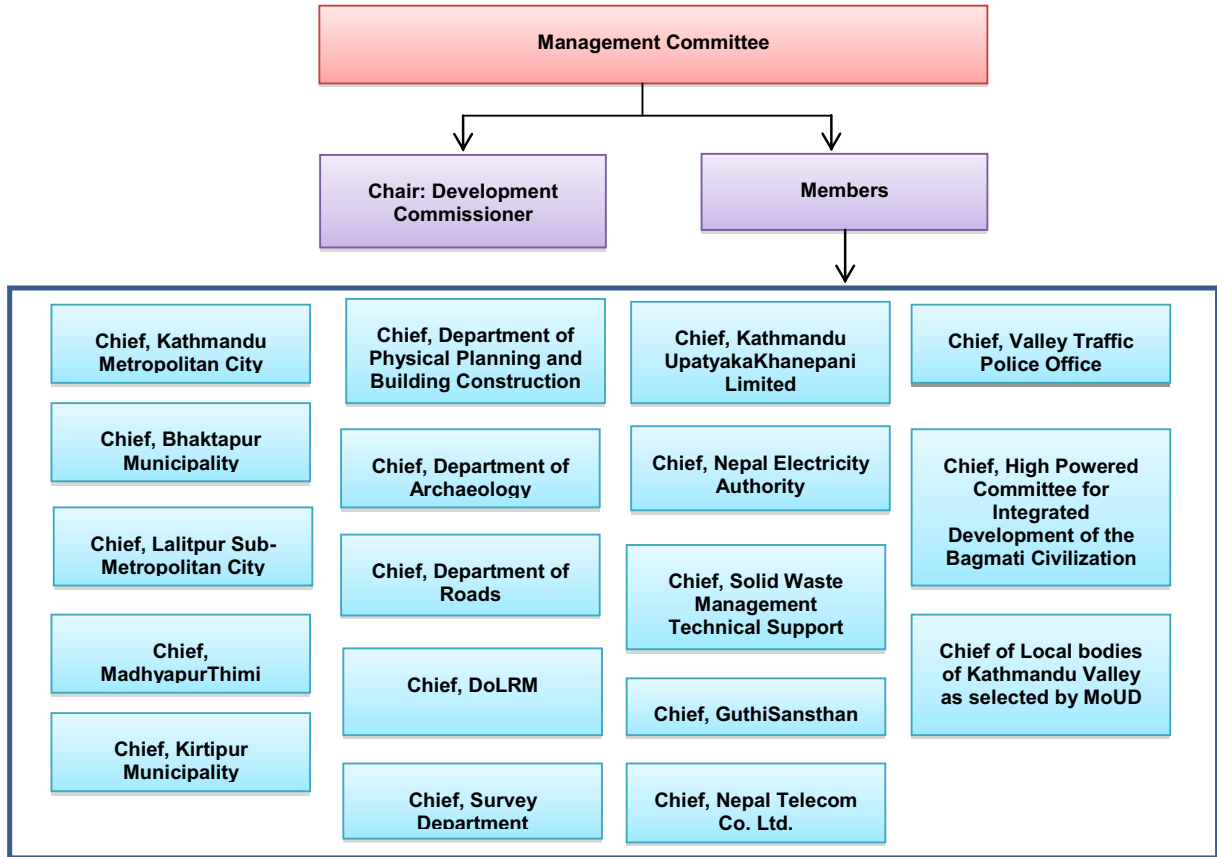

Figure 7-4 Management Committee Structure of KVDA

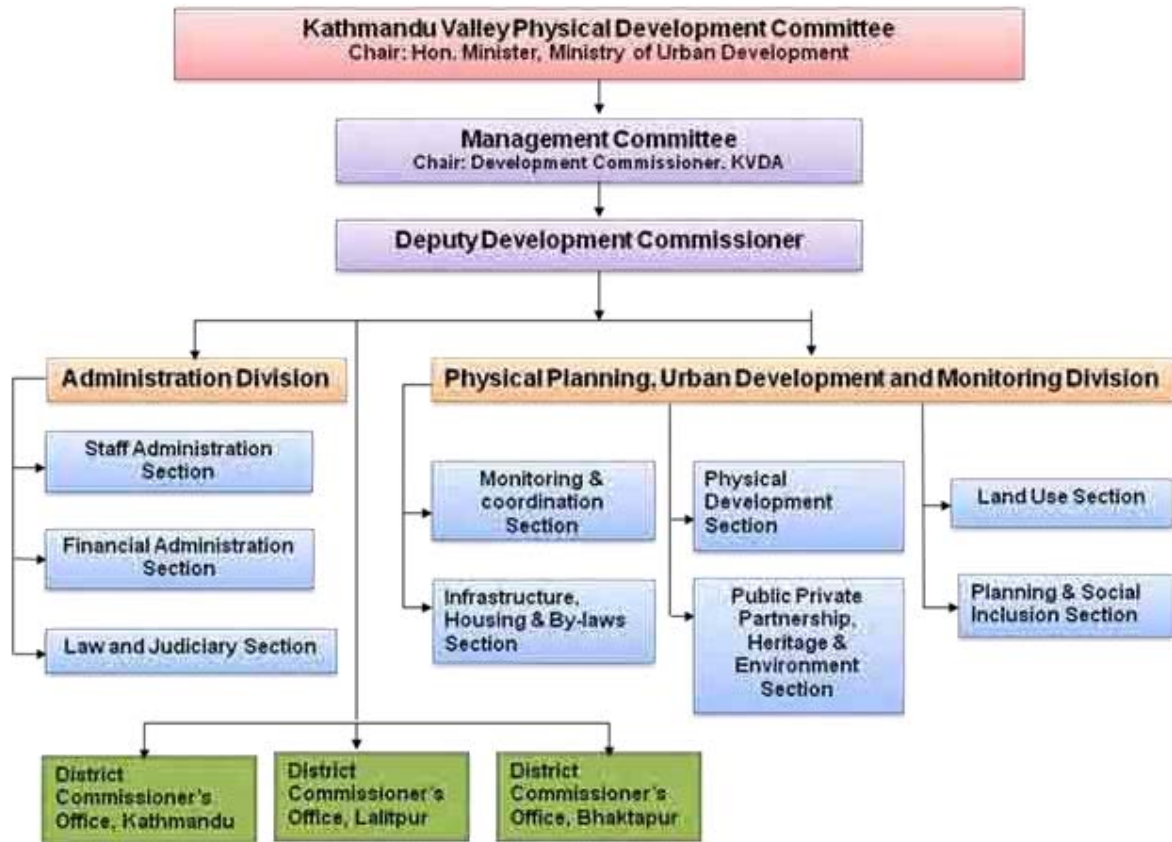

Figure 7-5 Organizational Structure of the KVDA

KVDA needs to play the role of the Valley Planning Commission so as to start coordination right from the planning level. In order to achieve its vision and mission, a modified version of its current organizational structure is highly essential.

7.3.2 Proposed Implementation Structure

While both the PDC and the management committee are proposed to remain unchanged, major restructuring has been made in the envisaged institutional set up of KVDA (Figure 7.6). This reformation is essential to align KVDA's institutional framework with its functions proposed and to deliver the Strategic Plan, to continually monitor and evaluate outcomes and to update the Plan for the next cycle of major revision. The "new" vision of KVDA and greater needs of coordination in the planning process have ultimately necessitated a major overhaul again with the development and delivery of the Strategic Plan. Implementation of the Plan requires greater resources than what is currently available. As in the existing structure, the organizational structure would be headed by the Development Commissioner of KVDA. A Technical Advisory Group (TAG), consisting of 7 specialist professionals from the civil society, has been formed to advise the Development Commissioner of KVDA in the preparation and implementation of the Development Plan and in development related decision-making matters for Kathmandu Valley.

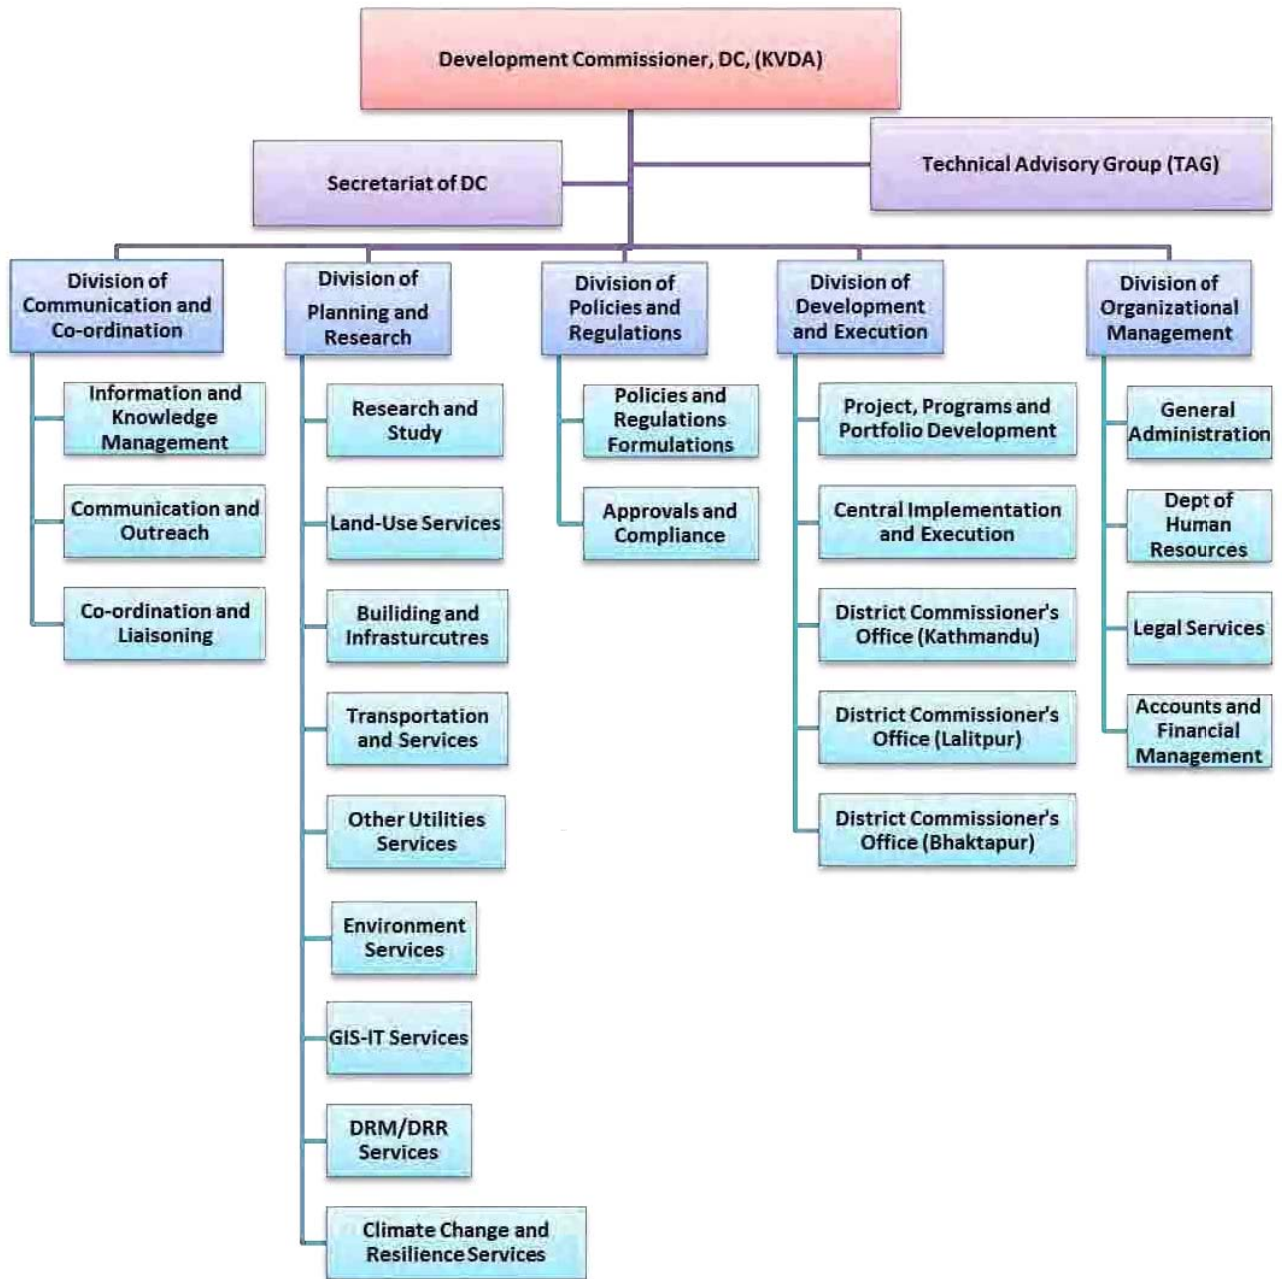

Figure 7-6 Institutional Set-up suggestion for KVDA

The detailed functions of the proposed new divisions and its sections/units are presented in the Annex of this chapter.

7.4 Financing SDMP

Full implementation of SDMP and its programs will require significant financing. Internal sources including provisional government grant to KVDA will be insignificant in terms of scale of works and their budgetary requirement. Implementation of SDMP should be accepted by the government as one of the nationally significant “pride project”.

On analyzing the financial investments for KVDA, based on NUDS, investment is calculated for developing minimum infrastructure, open spaces and land banking in KV to achieve the aspired vision by 2035. The calculated investment accommodates the population projection till 2035 and suggests to accommodate 850,000 population in planned residential development areas with development of 111,184 ropanies of land through land pooling. The calculated investment for development of minimum infrastructure is based on the standards set in NUDS, however the factor of 1.5 is used as KV being the capital region necessitates higher standard of infrastructure. Similarly, 10% of open space is envisaged in future development, which may include existing public land. The calculation demands about NRS 600 billion for development of minimum infrastructure, NRS 11 billion for development of open spaces and about NRS 90 billion for land banking in land pooling projects. (Annex 2)

KVDA has a firm legal grounds to acquire necessary funding through viable internal and external means. The KVDA Act (Provision 16) states that KVDA shall have its own fund to manage its programs upon approval from GoN. The following three major windows may be used to generate the resources for a permanent KVDA Reserve Fund.

7.4.1 Grant

Since its establishment, KVDA is running its organization and conducting its activities through annual budgetary allocation from Ministry of Finance (MoFIN) like any other government agencies. However, the provided budget is in the form of a grant, any unspent amount at the end of a fiscal year cannot be retained for the next fiscal year, as it has to be surrendered back to MoFIN at सर्व संचित कोष (All Accumulated Fund).

The procedure for obtaining budgetary support will follow a universal governmental model. Thus KVDA Act's Provision 19 envisages a separate "KVDA Fund" where all financial support received from following sources is to be deposited:

a. Grant from GoN

With the proposed implementation of SDMP programs as the “National Pride Project” and organizational re-structuring requirements, major financial intervention from the GoN is necessary. Annual budget allocation must be boosted with additional budget provisions for “package” implementation programs identified by the SDMP. These package programs may require to be implemented as multi-year programs, which will need multi-year financial commitment as “package budget provisions” from the GoN. Additional grant is also needed for organizational restructuring and institutional capacity building of the KVDA if it is to function to fulfill its mandates. Financial plan for such package implementation programs and institutional capacity development will be prepared by the KVDA and submitted to the MoF for annual budget grant.

b. Any financial support from international, bilateral or multi-lateral agencies

Financial support from the international development partners, multilateral or bi-lateral sources will be actively sought by the KVDA with the support and coordination with the MoF and MoUD. Development partners such as ADB, WB, JICA, UNDP and others have been supporting KVDA for various other development and planning related activities. Their roles on specific sectors will be defined and assistance requested on program package basis.

c. Any income acquired from the mobilization of KVDA's own asset

KVDA does not own capital assets for income generation. KVDA must be capacitated to purchase land and retain as its primary capital assets. These lands should be used for land banking, land adjustments, transfer of development rights and other mechanisms that enable KVDA to capitalize its land assets.

d. Issue of development bonds

Another mechanism for mobilization of land assets is to issue development bonds to the interested investors, primarily licensed real estate developers.

e. Any other amount received by KVDA

Any other grants received through government channel will boost the implementation for the SDMP programs to be undertaken by the KVDA.

7.4.2 Loan

KVDA has been receiving loan to some extent from GoN to support implementing participatory Land Pooling (Land Readjustment) projects. The one and only source to pay back the loan and interest to GoN is through the 2% margin of spread rate between what KVDA pays to GoN and it receives from the land pooling projects.

7.4.3 Other Arrangements

KVDA has not received any direct financial support (grant or loan) from any external agency. It is apparent that even to receive few soft loans; KVDA's revenue generation modality has to be in place. Hence, another source of fund could be the contribution of the inhabitants of Kathmandu Valley at House-hold level. Through the concept of "safer & resilient Kathmandu Valley" surcharge on following taxes could be collected by GoN and transferred to the KV Integrated Development Fund:

a. Provision of tax collection from land transaction within KV Development Region

According to the statistics from the DoLRM published in (Giri, 2014; Kathmandu Post, 2014), land revenue from property transaction surged more than 50% from the previous year and hit record

high of NRs.7.81 billion in FY 2013/14 of which land revenues from Kathmandu Valley contributed 35% (i.e. about NRs. 2.73 billion) of the overall transaction. Proportion of land revenue tax may be allocated to KVDA as land development tax. Further, upon the implementation of Risk Sensitive Land Use Zoning and its ordinances, taxation mechanism will regulate land use changes and overall land transactions. Revenues from this regulatory taxation should be allocated to the KVDA fund. These funding modalities through land revenues from various land transaction mechanisms may be collected for KVD fund:

- Allocation of certain proportion of land revenue from and transaction to KVDA development fund
- Additional tax levy for KVDA development fund in land transactions
- Land use control tax, penalties and fines
- Land pooling for agriculture, commercial, industrial and special infrastructure
- Additional tax in capital gain for the land property

b. Tax collection on vehicle registration within KV

Emissions from vehicles (PM_{10} , $PM_{2.5}$, CO, O₃, S₂O, NO, etc.) are the main contributors of environmental pollution in the KV. The number of vehicles registered in the Valley in 2014 reached 8,22,449¹. Dept. of Transportation Management collected vehicle tax of NRs. 2,167,766,699² during F/Y 2070/71. Certain proportion of this could be allocated to KVDA fund as vehicle and pollution tax.

c. Tax from airport authority (for provision of built up restrictions and noise pollution)

KVDA, in its Risk Sensitive Land Use plan has defined Aircraft Approach Funnel in the southern and northern regions of the TIA (as defined by the CIAA of Nepal) and is regulating high-rise constructions that may obstruct the landing and takeoff of international and national flights. It therefore may be rational to levy some tax to the airport authorities for built-up restrictions and noise pollution. This could be imposed upon carriers and airlines operators from the TIA and allocated to KVDA fund.

d. Polluters' Pay Principle Taxes

As an eco-tax and an effort to reduce the greenhouse gas emissions in KV, polluters' pay principle taxes should be enacted for public vehicle operators (diesel and petrol public vehicles operating in KV and along external routes), transportation and truck operators, quarry operators, brick kiln operators and other polluters. Air pollution, surface water pollution, ground water polluting will be curbed through taxations and fines to the polluting industries.

7.5 Coordination and Collaboration

¹ As per the Information provided by Metropolitan Traffic Police, Kathmandu on 8.9.2015

² <http://www.dotm.gov.np/uploads/files/Revenue-Collection-2070-71.pdf>

The KVDA has developed the 20 years Strategic Development Master Plan to address the urban issues taking entire Valley as a development unit for urban development and make Valley livable through sustainable urban management. Sustainable urban management is only possible when all the related institution work together in a coordinated way. As depicted by the strategy "Two levels of planning", while local government would have a more proactive role in the development of local level plan and infrastructure development at micro level, the proactive role of KVDA is highly important to prepare and implement regional level land use plan and regulatory control measures along with data management and capacity building activities to develop safer, cleaner, resilient and livable Kathmandu Valley. It is also necessary to update monitoring and planning regulations while defining the authority of KVDA.

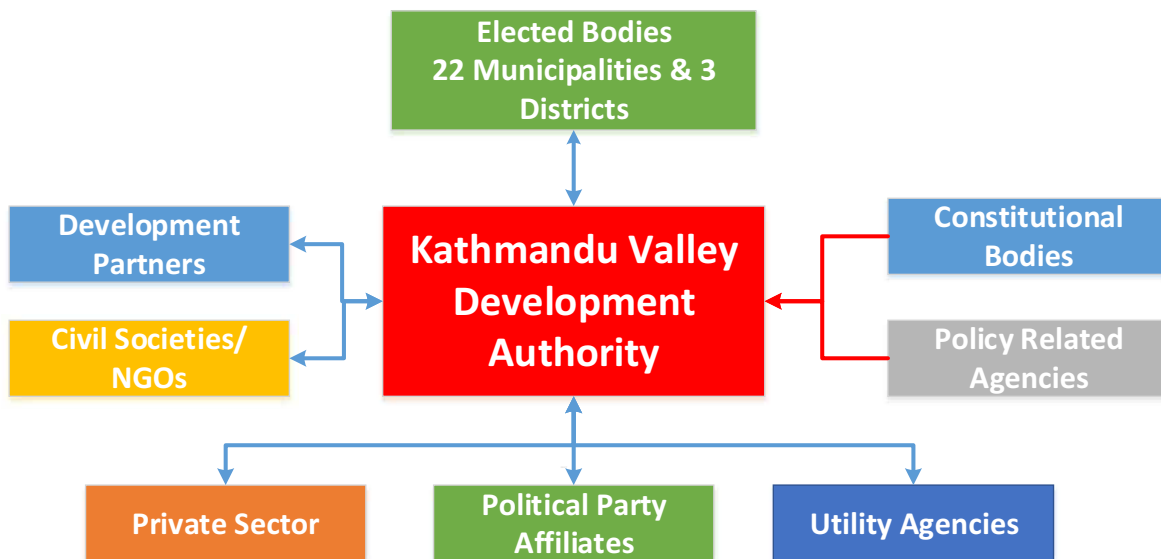

Figure 7-7 Interlink between KVDA and related organizations

KVDA has its governing body the ‘Kathmandu Valley Physical Development Committee’ that is represented by the Ministers and Secretaries from key ministries related to urban development and local governance, DDC chairpersons and chiefs of Municipalities from the valley districts and towns. As the governing body of the KVDA, KV PDC may be reformed to bring Members of Parliament from the Valley on board to make sure the people's representatives from the valley take part in the permanent mechanism of KVDA for policy guidance. This will ensure better linkages and coordination among the institutions responsible to the valley's development.

Similarly, the Management Committee under the KVDA also gives an opportunity to the Chief of municipalities from the cities of Kathmandu valley, Chiefs of Utilities offices, Chiefs of departments related to urban development come together, work together to minimize the duplication and increase the effectiveness in the development interventions.

Another platform created within KVDA is a Technical Advisory Group that provides expert advice, information and make recommendations to the Management Committee for preparing the Development Plan of KVDA and suggest a feasible methodological framework for its implementation, help enlist the involvement of experts from the civil society at grass root level for reforms in urban governance through Ward Committees and Voluntary Technical Corps in each cities within the Kathmandu Valley from the diverse group of people.

Finally, the proposed Division of Communication and Co-ordination would give a better ground to co-ordinate with stakeholders/ collaborative partners such as utility agencies, local municipalities and VDCs, NGOs/INGOs, other local bodies, government agencies, collaborators, civil society organizations and media and business communities. These platforms give plenty of opportunity in formulation and implementation of related plans, programs, regulations, standards, guidelines, acts and policies, handle the communications, outreach and knowledge/information management functions of KVDA and its divisions. Thus, the role of KVDA as a major coordinating agency has to be well emphasized both to ensure better coordination among concerned institutions within the valley and as a major linkage to balance the top-down and bottom-up approach for the overall development of Kathmandu Valley.

Coordinated effort is imperative as there are multiple organizations (local bodies, government line agencies, private and public organizations, utility authorities, development partner supported programs) including major infrastructure interventions such as Melamchi Water Supply, Fast Track, as well as various apex authorities such as High Powered Committee for Integrated Development of the Bagmati Civilization(HPCIDBC) working in the Valley in aspects of urban development, infrastructure and environment. It is imperative that that these different entities are coordinated under one umbrella and overlapping mandates/responsibilities be centralized under one roof.

7.5.1 Exclusive Authority for Integrated Development of KV

KVDA Act has exclusively mandated KVDA as a sole government authority, directly under the central government, to undertake and execute **Integrated Development of Kathmandu Valley**. The government, under different political leadership, however, created multiple agencies with similar and overlapping responsibilities in the last decade of political transition. Now it is evidently realized that these agencies are impeding integrated development of the KV due to lack of their coordinated works, duplication in resource mobilization, lack of transparency and more seriously unnecessary encroachment in other agencies' mandates. The coordination must be done through and by the sole mandated agency KVDA. Overlapping responsibilities must be centralized and shared responsibilities bedefined. Establishment of new agencies with new responsibilities must be discouraged and such required new responsibilities be channelized through the KVDA. KVDA must be recognized and transformed as a financially autonomous entity in addition to its current legal autonomy, strengthening its institutional capacity, human resources, financial resources, as well as mandated to generate its own resources.

GoN has created several authorities such CAAN, NEA, KVWSMB, NTAetc. and have empowered them with exclusive rights to implement government's plans and policies in respective sectors. These authorities have also been mandated to plan, construct, operate, maintain, regulate and revenue generation in a form of tariff/fee collection for service provided to general public and businesses. However, KVDA, formed under similar Act, with an authoritative mandate to prepare and implement **Physical Development Plan** for integrated development of the KV, has not been able to effectively exercise its empowered mandate, primarily due to overlapping and often impeding functions of different line ministries (MoLRM, MoFALD, MoUD, MoPIT), different departments (DoR, DUDBC, DoLRM), authorities (KVWSMB/KUKL, HPCIDBC) and municipal offices.

Authorities such as CAAN has exclusive right for the skyways to operate and regulate the use of Nepalese sky for commercial and non-commercial aviation and generate revenues; NEA has exclusive right to generate, regulate, transmits and distribute electricity earning revenues; NTA

similarly has exclusive right to regulate telecommunication frequency to earn revenues. Within KV, authorities such as KVWSMB/KUKL has exclusive right to generate revenues through distribution of drinking water and management of sewerage. *Per se* KVDA as an authority for integrated development of KV with its role as a 'planner, developer and regulator' should be able to exercise its exclusive mandate for the integrated development of land, infrastructure, and utility services. Availability of land is the prerequisite for these functions, therefore KVDA must be mandated to administer and manage land resources with exclusive authority within Kathmandu Valley Development Region. Conflict of functions with MoLRM and Land Revenue Offices should be resolved through definition of specific functions such that MoLRM and its related departments/offices are responsible for preparing, managing and archiving the land records and KVDA, as the planning and implementing authority of land use and development, be responsible for regulating and managing land related transactions.

Other infrastructure services and provisions to support utility providers should also be administered by the KVDA. With the concept of integrated development, land use planning/development and infrastructure development should go in conjunction and in coordination. KVDA should be mandated to provision planned land for urban utility and infrastructure corridor for road (strategic roads under DoR), electricity transmission line, telecommunication distribution line, water supply and sewerage systems and other infrastructure. Utility corridor is guided by the land use plan and required land is provisioned to the infrastructure or utility authority on lease or sale for their service infrastructures. This will also enable coordinated urban infrastructure development between KVDA and other infrastructure and utility service providers.

7.5.2 Exclusive Authority for Road and Integrated Transportation of KV

Management of vehicular traffic within KV is proving to be a major challenge to the authorities. Insufficient road infrastructures, narrow unconditioned roads, unregulated public transportation system and un-proportionate volume of two-wheel and four-wheel vehicles with respect to road length are common characteristics of traffic system in KV. This is further exasperated by uncoordinated road constructions, utility service constructions, lack of service repairs which has proven to be cause of major discomfort to general public in KV. Integrated land use and transportation planning are inseparable and has been conceived accordingly by the SDMP. Therefore, along with the exclusive authority of the land, exclusive authority for development, maintenance and management of roads (excluding Strategic Road Network managed by the DoR) within the KV should be mandated to the KVDA. Along with the maintenance of the roads, transportation management along its roads should also be mandated to the KVDA. KVDA, under its leadership, has successfully demonstrated the recent road widening in coordination with other authorities. This exemplary success case demonstrates the capabilities of KVDA to undertake coordinated effort and ownership of the roads and transportation system in KV. Under its authority and ownership, KVDA should be mandated to undertake

- Integrated planning, construction, maintenance, management of road assets.
- Operate (under BOOT model) transportation system including mass rapid transit (MRT), bus rapid transit (BRT), automated guided transit (AGT) and green transportation infrastructure

Revenues from toll-roads, and transportation system will pour in additional finances for implementing SDMP.

7.6 Research and Innovative Use of Technology

In the context of “evidence based planning”, research and analysis of information is pre-requisite for informed decision making in urban planning. Research gives an outlook of the similar issues elsewhere, and enables to develop innovative methods and strategies to tackle the issues. Concept of “think globally act locally” should be adopted and adapted to address the universal problems of urbanization. Research enables to tackle the issue scientifically and practically on the basis of reliable information. The lessons learned through the researches could be up-scaled and adopted throughout the country as the best practice in urban sector.

KVDA’s vision to establish itself as a “Learning and Innovation Center” is a step towards embracing research and development as a backbone of informed decision-making. Any new plans, programs and implementations defined under the objectives of the SDMP seeks to undertake innovative research to design in details considering cross-cutting issues, coordination among the stakeholders and active participation of the civil society. Understandably, research based planning works help to define the problems accurately and find optimum solutions. Further pilot based implementation tests the feasibility and acceptance of the planning, minimizing the cost and ensuring viability in larger scales. Any planning and its implementation should allocate provision of 5-10% of budget for research and innovation. As such the financing of the program and implementation should provision appropriate budget for research and development, which will prove to be additional value to the planning and result in more effective implementations.

Use of advance technologies adaptable and affordable in the national context will enhance research capabilities and in-turn support sustainable planning of KV. Access to information highway (i.e. internet) enabling use of Geo-Information Communication Technology (Geo-ICT), location based intelligence, earth observations, smart sensor network, and many more innovations of 21st century is within easy access and understanding of the new generations of Nepalese. Extensive use of Geo-ICT should be pursued to enable Kathmandu Valley as the national capital to aim for being a “Smart City” in the next decade. Some of the innovative technologies that will support informed decision-making in KV could be recommended as the following:

- Use of ICT for coordination and collaborations with the stakeholder, partners and civil societies.
- Development of Integrated Urban Information System using Geo-ICT and Earth Observation technologies for informed decision support, collaborative planning, implementation and monitoring.
- Development and installation of Smart Sensor Web system to monitor the environment and hazards for early warning and mitigations.
- Encourage and enable citizens’ participation in data capture, planning and monitoring through crowd sourcing.
- Encourage and introduce smart public transport system, public service delivery.
- Encourage and introduce smart building design and construction practices encouraging energy efficiency and livability.

7.7 Cross Cutting Issues

7.7.1 Accountability Mechanism

In order to make Kathmandu Valley safe, clean and livable for its residents, KVDA could consider the following factors to make it more accountable to the residents of the Valley. These elements would help increase the level of awareness and strengthen its accountability.

Besides the existing government mechanisms for grievances and complaints, new and innovative use of ICT will be used to enable public participation in SDMP implementation, monitoring and reporting. Such innovative tools are web based on-line petition and suggestion collection system, mobile based application for crowd-sourcing data collection, reporting and public monitoring. Other tools such as web-based Decisions Support System will also be implemented for “citizen-planners” and line agencies to participate in the SDMP planning and implementation processes. Mechanisms for transparency and accountability are as follows:

- Grievance hearing mechanism through “SujhabPetika” or Suggestion Box and toll free telephone line
- Maintain information desk for regular media briefing about activities/programs through spokesperson
- Develop and display citizens’ charter
- Recognize Right to Information (RTI) as key element of transparency and provide access to data and information via internet
- Social audit through public hearings on projects
- Publish annual report, study reports, plans each year
- Incorporate Open Meeting Laws for major policy level decisions for elected and appointed boards and commissions
- Institute volunteer boards and commissions for various activities: parks, pedestrian activities, housing, disaster management etc.
- Implementation of on-line and mobile application based petition system
- Implementation of crowd sourcing and online Decision Support System

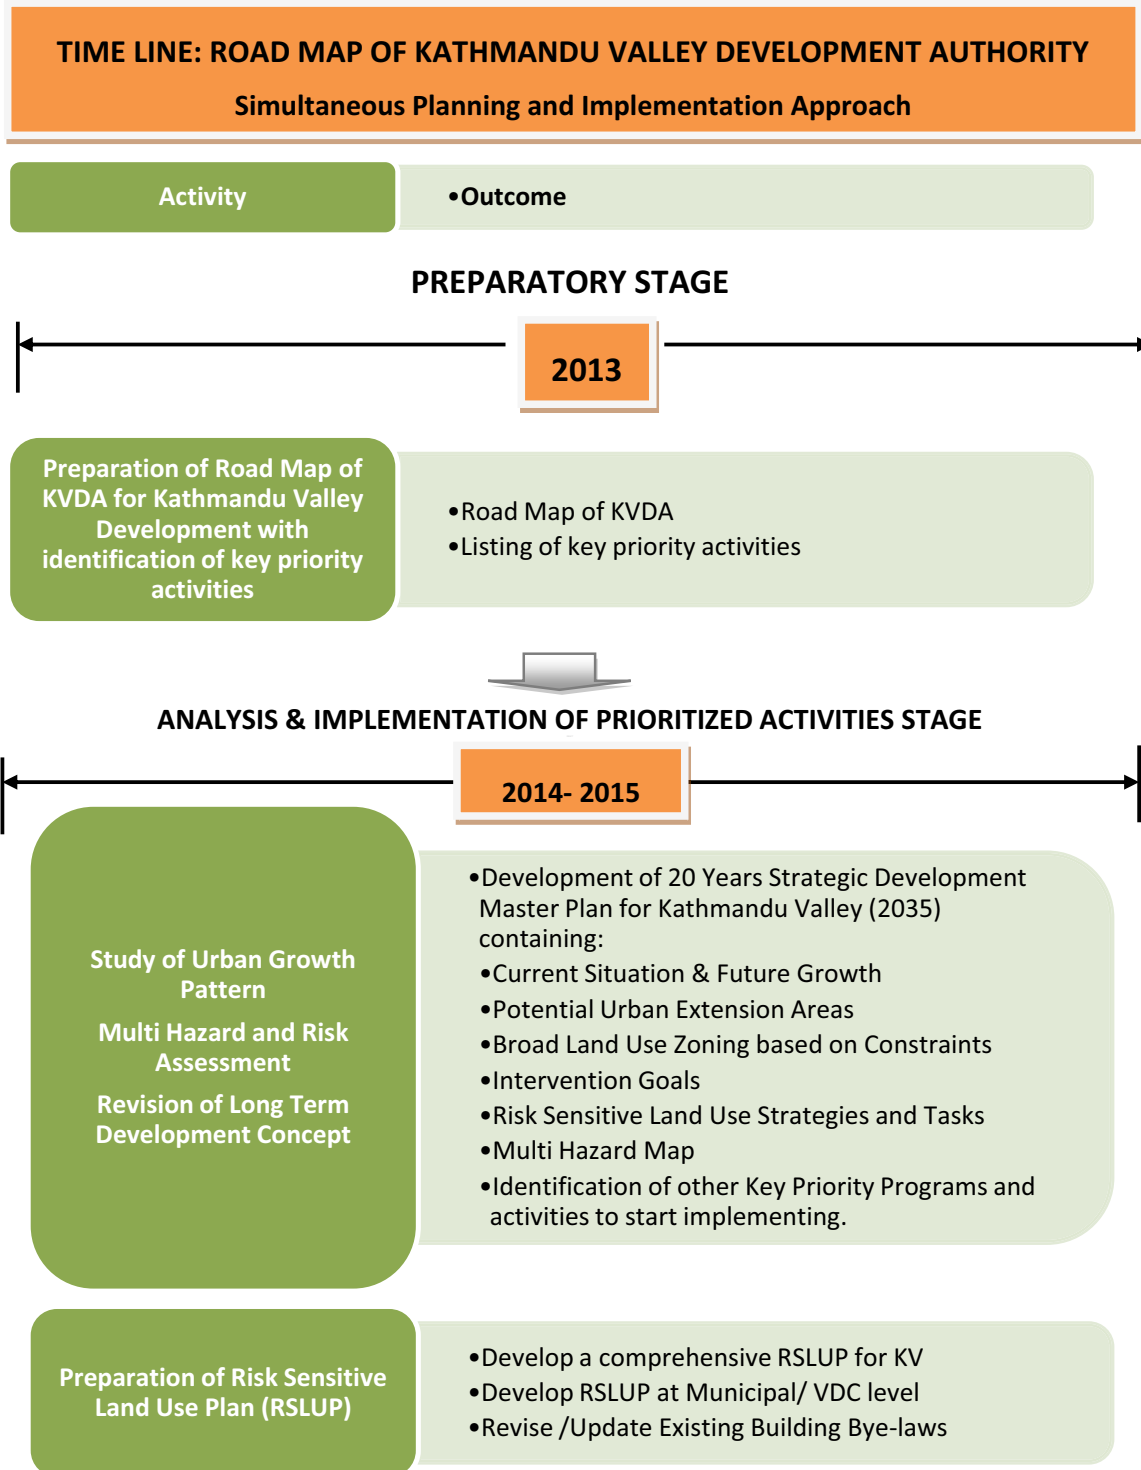

7.7.2 Gender and Social Inclusion

As the SDMP strives for development of Kathmandu Valley, it is also important to make the approach and outcome inclusive, such that the benefits of change are distributed equitably. Inclusivity means accessibility of women, economically weak and socially excluded people to opportunities and services that urban development has to offer. The issue of Gender Equity and Social Inclusion (GESI) has been recognized and adopted in the national as well as sectoral policies and plans, which makes the internalization of the issue in the interventions proposed by SDMP both inevitable and necessary. Some major policies, plans and guidelines that provide foundation for KVDA to internalize GESI are:

- The Constitution of Nepal (2072) underscores GESI to address the issue of inequality, such that the provisions in Right to Equality, Right against Discrimination, Right of Women, Right of Dalits, Right to Social Justice confirms the development activities to be sensitive towards women, Dalits, Janajatis, Madhesis, economically weak and other marginalized group
- The 10th Five-year Plan (2002-2007) was focused on poverty reduction with social inclusion as one of the four pillars.

- In 2007, the government adopted National Urban Policy that aspires to achieve healthy secure and economically vibrant urban environment with major strategies for increasing accessibility of the economically deprived groups to affordable land and dwellings.
- In 2013, MoUD adopted GESI Guidelines 2013 that aims for increased access of women, poor and economically deprived groups to resources and development benefits.
- The National Urban Development Strategy (2015) has undertaken 'Inclusivity' as one of the five guiding principles to promote social justice and contribute to equity and balanced development.

7.8 Road map for the Implementation of 20 Years Strategic Development Master Plan(2015 – 2035) for Kathmandu Valley

Project on Urban Transport Improvement of Kathmandu Valley in collaboration with JICA

- Establishment of Comprehensive Urban Transport Master Plan
- Implementation of Pilot Project
- Capacity development of relevant agencies to monitor, maintain and alter the Master Plan

ANALYSIS AND IMPLEMENTATION OF PRIORITIZED ACTIVITIES STAGE (Contd..)

2014- 2015

Implementation of Key Activities

- Implementation of Key Activities such as:
 - 10 ecological parks design and construction, 2 under progress
 - Implementation of road side beautification works in 5 sample widened roads
 - Develop guidelines for street beautification
 - Develop guidelines for urban roads
 - Updating of Road widening and GLD guidelines
 - Preparation of Open Space ATLAS
 - Application for GEF fund (USD 7 million) for implementing urban EbA- Under consideration in Peru Climate Summit

Institutional Development and Capacity Building of KVDA

- Study of existing Statutory & Legal Provisions, Org. Structure, Staffing and Financial Resources
- Provision for the establishment of committee to develop Urban Standards and Regulations
- Institutional Mapping of Govt & NGOs working in physical development of KV
- Design & Const. of Learning-Innovation-Application Center
- Revision of Bye-laws, acts and regulations to develop
- Preparation of IEC materials to promote KVDA
- Endorsement of Institutional Development, Capacity Building & IEC plan from MoUD
- Design & Construction of KVDA Building
- Institutional Development Program

PLAN PREPARATION & IMPLEMENTATION OF PRIORITIZED ACTIVITIES STAGE

2015- 2016

High Priority Action Plan as emerged due to the Earthquake of April 25, 2015 and consequent aftershocks

- Prepare Kathmandu Valley Resilience Plan
- Development, Conservation and Management of Multipurpose open spaces in Kathmandu Valley
- Establishment of hierarchy of Road Network (Proposed Kathmandu Valley – urban road standards could be basis for normal road width determination)
- Preparation of Risk Sensitive Land Use Plan (RSLUP) and zoning of possible building heights, permissible and restricted uses
- Preparation of Planning/ Building By laws
- Modification in present Land readjustment regulation
- Regeneration of 'agro-politan' Traditional Settlements: Learning from past for a sustainable future
- Ward-wise Damage Assessment Mapping and Valuation of loss (including economic loss)
- Project for Assessment of Earthquake Disaster Risk for the Kathmandu Valley in Nepal
- Kathmandu Valley Urban Transport Improvement Project

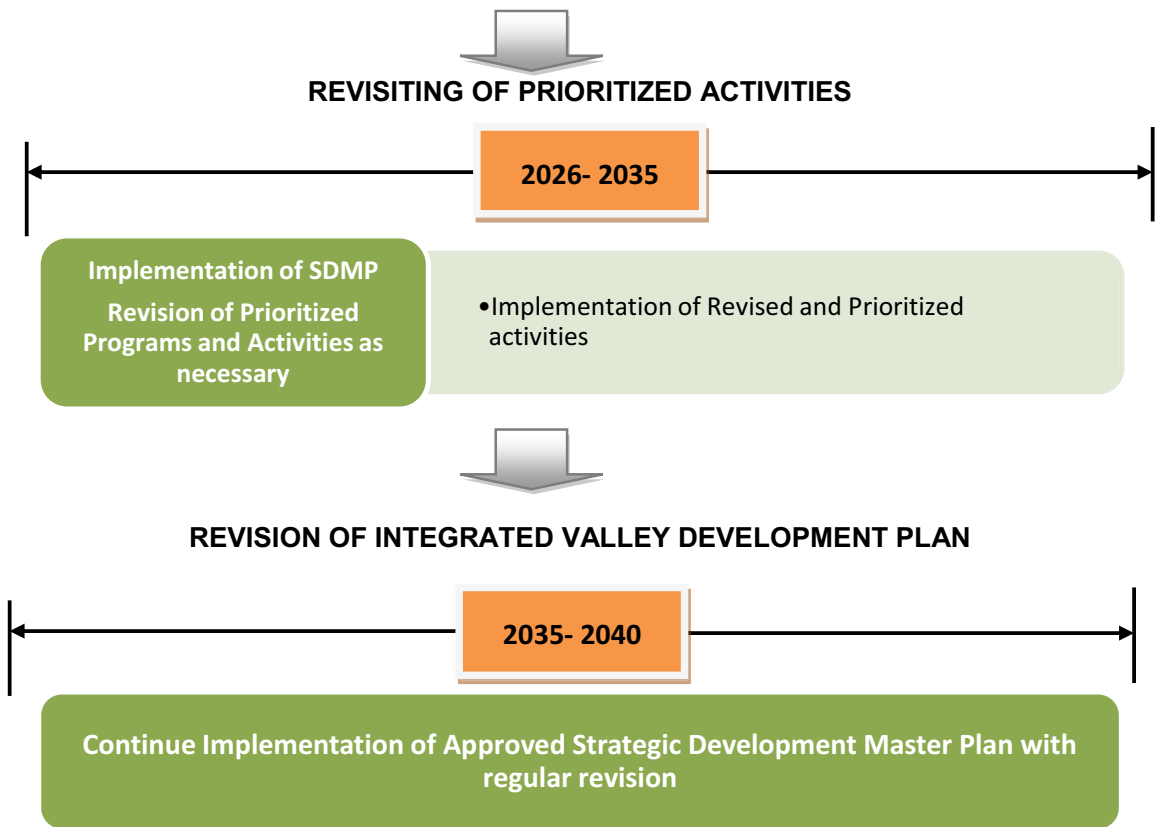

Institutional Capacity Building of KVDA

- Continuation of Various Activities listed in the Analysis stage

CONTINUED PLANNING & IMPLEMENTATION STAGE

HIGH PRIORITY ACTIVITIES

(POST-DISASTER PLAN FOR KATHMANDU VALLEY)

- 1. Coordination of “reconstruction and rebuilding” of Kathmandu Valley**
 - 1.1. Collaborations and coordination with Reconstruction Authority for “rebuilding of Kathmandu Valley”

- 2. Development, Conservation and Management of Multipurpose open spaces in Kathmandu Valley**
 - 1.2. Identification and cadastral mapping of public land – Government (सरकारी), Public (पुर्ती) Private (निजी), Guthi (गुठी) and Nepal Trust Gazetted Land
 - 1.1. Publication of officially mapped sites at cadastral level in an "easy to understand" Open space Atlas of Kathmandu Valley
 - 1.2. Prepare policy on how privately owned open spaces in denser areas can be utilized for public use in case of disaster

- 3. Establishment of hierarchy of Road Network (Proposed Kathmandu Valley – urban road standards could be basis for normal road width determination)**
 - 2.1. Mapping of existing road network
 - 2.2. Alignment fixing for additional transport network
 - 2.3. Determination of easement widths for future development of public transport system
 - 2.4. Aligning of road networks with critical facilities such as hospitals, educational institutes and large congregation areas)
 - 2.5. Identification and development of "multi-purpose public open spaces" for temporary shelters and aligning of road networks with the open spaces
 - 2.6. Translating of the road network map into cadastral system

- 4. Risk Sensitive Land Use Plan (RSLUP) and zoning of possible building heights, permissible and restricted uses**
 - 3.1. Preparation and implementation of Risk Sensitive Land Use Plan (जोखिम संवेदनशील भू-उपयोग योजना)
 - 3.2. Preparation of Zoning based on RSLUP
 - 3.3. Risk Sensitive Land use Plan Validation and Micro-zonation
 - 3.4. Coordinate with the JICA Team to immediately mobilize resources for Damage Assessment
 - 3.5. Prepare a comprehensive map that includes Zoning and Transport system
 - 3.6. Cadastral mapping of RSLUP zoning

- 5. Preparation of Planning/ Building By laws**
 - 4.1. To accommodate Pts. 1,2,3 mentioned above
 - 4.2. FAR to be introduced only in Transit Oriented Development and Land Value Capture Zone
 - 4.3. No more than 5 storey building with current material, skill, method and mindset
 - 4.4. Combination of House and Land pooling to be piloted

6. Modification in present Land readjustment regulation and process (जग्गा विकास कार्यक्रम प्रक्रियामा संशोधन)

- 5.1. Facilitation of Large parcel of land assembly
- 5.2. Develop policies and incentive mechanisms to increase the percentage of Land contribution by owners (40-60%)
- 5.3. Develop policies to encourage cost contribution by public sector, Government of Nepal and others to infrastructure and for partial compensation of land
- 5.4. Develop a public/ social need based approach to balance the current situation of bottom up approach
- 5.5. Promotion of vertical living up to 5 storey
- 5.6. Develop stringent policies to promote building permission in group of plots (5 – 10 ropani) and prohibit individual building permission
- 5.7. To follow Regional Transport Master Plan for Land readjustment
- 5.8. Moratorium of land subdivision on areas identified for new planned development

7. Regeneration of 'agro-politan' Traditional Settlements: Learning from past for a sustainable future

Bhaktapur has benefitted well (US\$ 190 Million direct return over 17 years by investment of US\$ 1.6 million over 12 years in Conservation and Development.

- 6.1 Immediate damage mapping by Unmanned Aerial Vehicle (International offer Available)

8. Establishing Kathmandu Valley Integrated Information Center for better coordination and to avoid duplication of Resources

- 9.1. Establishment of Kathmandu Valley Integrated Information Center
- 9.2. Development of Land Information System in coordination and cooperation with Survey Dept. and Dept. of Land Information and Archive (DoLIA)
- 9.3. Development of Integrated Urban Information System for KV

9. Institutional and Capacity Building of KVDA for planning as well as implementation

Chapter Summary

Implementation of strategies requires metamorphosis of KVDA into the “centre of excellence” and a visionary authoritative agency to align different sectors/agencies functioning within KV to achieve the aspired goals. The six critical factors influencing and determining the implementation of 20 Years SDMP are:

1. Supportive Legislative and Legal Framework:

The new “Constitution of Nepal 2072”, has made various provisions, which unequivocally enables KVDA, as an apex planning body for KV, to execute SDMP programs avoiding any legal contentions or disputations. The vision and mission of SDMP is aligned with the legislative clauses under the Fundamental Rights, which strengthens the importance of implementation of SDMP **“to establish Kathmandu Valley as a Safe, Clean, Organized, Prosperous and Elegant (SCOPE) National Capital”**. Furthermore, the explicit provision for “environment protection, managed housing and urban development” in the constitution entails legal basis for KVDA and authorities to acquire/requisite necessary land for the implementation of SDMP.

The budgetary initiative by the government has given emphasis on urban development through strategic investment. The budget speech of 2071/72 has recognized KVDA as the main urban development partner for holistic development of Kathmandu Valley and any physical development inside Kathmandu Valley would require recommendation and consent from KVDA. The budget speech of F/Y 2072/73 has specifically emphasized Kathmandu Valley as the “National Capital City” and need for an integrated development, which will be implemented through program packages as identified by the SDMP.

The Government of Nepal has participated in many International Conventions and Conferences like Convention of Parties COP 21, UN Sustainable Development Summit, SENDAI Framework for the Disaster Risk Reduction 2015 – 2030, Habitat II and has made commitment to adopt the objectives of such programs in the development agenda. SDMP have taken due consideration of these international conventions and have addressed in its strategies through defining specific objectives and action plans.

2. Land Management and Reform: Articulating a move from 3D to 3C

KV has only 34.8% of constraint free area for further planned development that depicts land supply as a major issue with direct implications on development of urban infrastructure and services. Hence, accelerating Land Management through wider stakeholder participation is fundamental to achieve planned development. This necessitates to move from current situation of Kathmandu Valley's "Distant, Dispersed and Disconnected" [3D] pattern to "Compact, Connected and Coordinated" [3C] development, which is fundamental to achieving KVDA's mission. Hence, efficient usage of land, in the form of land pooling, land banking or efficient connectivity to transport are taken as crucial initiatives in SDMP in achieving the sustainable development goals. Special attention will also be given to land needed for major infrastructure planned in the KV such as Melamchi Water Supply, Fast Track Road Network and others, which will require considerable land areas for various infrastructures.

3. Institutional Re-structuring and Capacity Building

Institutional development and capacity building of KVDA is a pre-requisite for the successful and sustainable implementation of the SDMP. While both the Physical Development Committee and the Management Committee are proposed to remain unchanged, major restructuring has been made in the envisaged institutional set up of KVDA, which is essential to align KVDA's institutional framework with its functions proposed and to deliver the Strategic Plan, to continually monitor and evaluate outcomes and to update the Plan for the next cycle of major revision. As in the existing structure, the organizational structure would be headed by the Development Commissioner of KVDA and a Technical Advisory Group (TAG), consisting of 7 specialist professionals from the civil society, has been formed to advise the Development Commissioner in the preparation and implementation of the Development Plan and in development related decision making matters.

4. Financing SDMP

Implementation of SDMP and its programs will require significant financing from various sources. Calculation of the financial investments for KVDA demands about NRS 600 billion for development of minimum infrastructure, NRS 11 billion for development of open spaces and about NRS 90 billion for land banking in land pooling projects.

The three windows to generate resources for KVDA Reserve Fund are:

- e. Grant: Grant from GoN is a major financial source for KVDA, which comes through annual budget allocation. The implementation of SDMP however requires a multi-year financial package. Similarly, grants from international, bilateral and multilateral agencies, mobilization of KVDA's own assets and issuance of development bond are other potential financial sources.
- f. Loan is also a possible financing mechanism for funding participatory land pooling projects.
- g. Other sources are Provision of tax collection from land transaction within KV Development Region, Tax collection on vehicle registration within KV, Tax from airport authority (for provision of built up restrictions and noise pollution), Polluters' Pay Principle Taxes.

5. Coordination and Collaboration

A "*Two levels of planning*" is required in which the local government would have a more proactive role in the development of local level plan and infrastructure development at micro level, the proactive role of KVDA is highly important to prepare and implement regional level land use plan and regulatory control measures along with data management and capacity building activities.

KVDA Act has exclusively mandated KVDA as a sole government authority, directly under the central government, to undertake and execute Integrated Development of Kathmandu Valley. Therefore, coordination must be done through and by the sole mandated agency KVDA by centralizing overlapping responsibilities and defining shared responsibilities. Integrated land use and transportation planning are inseparable and has been conceived accordingly by the SDMP. Therefore, along with the exclusive authority of the land, exclusive authority for development, maintenance and management of roads (excluding Strategic Road Network managed by the DoR) within the KV should be mandated to the KVDA.

6. Research and Innovative use of Technology

KVDA's vision to establish itself as a "Learning and Innovation Center" is a step towards embracing research and development as a backbone of informed decision-making. Any new plans, programs and implementations defined under the objectives of the SDMP seeks to undertake innovative research to design in details considering cross-cutting issues, coordination among the stakeholders and active participation of the civil society. Therefore, it requires any planning and its implementation to allocate provision of 5-10% of budget for research and innovation.

Functions and Responsibilities of the Proposed Organizational Structure

Functional Responsibilities of Technical Advisory Group (TAG) would include but not be limited to the following:

- Provide expert advice, information and make recommendations to the Management Committee for preparing the Development Plan of KVDA and suggest a feasible methodological framework for its implementation.

- Assist in reviewing alignment and integration of the Development Plan of KVDA to the achievement of its objectives; and make recommendations for improvement to ensure transparency and accountability
- Help enlist the involvement of experts from the civil society at grass root level for reforms in urban governance through Ward Committees and Voluntary Technical Corps in each cities within the Kathmandu Valley
- Report to the Management Committee on a regular basis providing its recommendations and advice on the on-going and future projects of KVDA

Functional Responsibilities of Secretariat of the Development Commissioner would include but not be limited to the following:

- Function as an executive support to the Development Commissioner
- Independently assess technical and institutional support needs, advise on proposed policies and program review through national and international expert teams before taking to Development Commissioner and Technical Advisory Group for finalization.
- Media control/ advice
- Communication advice, public relations, events, seminar, appointment
- Overall administration and management
- Monitoring and evaluation, Employees' performance planning and development, continuing professional development

The presently envisaged organization structure consists of 5 major Divisions under the leadership of the Development Commissioner of KVDA:

1. Division of Communication and Co-ordination
2. Division of Planning and Research
3. Division of Policies and Regulations
4. Division of Development and Execution
5. Division of Organizational Management

Functional Responsibilities of Division of Communication and Co-ordination would include but not be limited to the following:

- Co-ordinate with stakeholders / collaborative partners such as utility agencies, local municipalities and VDCs, NGOs/INGOs in relation to the formulation and implementation of related plans, programs, regulations, standards, guidelines, acts and policies.
- Co-ordinate as required with the related local bodies, government agencies, collaborators and other stakeholders to ensure the smooth enforcement and execution of the various plans, programs, policies, acts, regulations formulated in relation to the development of KV.
- Collect data/information of the strategic and operational concern from the various divisions and related stakeholders to create central repository of data/information management.
- Provide necessary data, information and feeds to the Division of Planning, Policies and Regulation and the Division of Development and Execution.
- Design and implement the communication and outreach programs among closely connected/internal and external stakeholders/ collaborative partners of KVDA, including private sector for the purpose of filling the gaps in information among the sources and intended destination of the same.
- Create co-ordination platform and manage the models of co-ordination and knowledge created thereby, with advisory groups.

- Co-ordinate and facilitate the process of strategic and tactical alliances, partnerships and collaborations with various agencies and bodies in accordance with the plans and programs.
- Handle the communications, outreach and knowledge/information management functions of KVDA and its divisions.
- Create and develop learning-innovation-application body and in order to develop common platform and opportunity of sharing information; internalize and institutionalize knowledge.

Functional Responsibilities of Division of Planning and Research would include but not be limited to the following:

- Formulation of long term, comprehensive planning, in order to execute and to advise Government agencies and related collaborators for overall and comprehensive development of KV remaining within the framework of long term development perspective.
- Study, analyze and research on the issues related to development initiatives in the context of KV along with relevant statutory, legal and regulatory provisions and thus utilize the inference to prepare plans and programs.
- Carry out all the preparatory tasks/functions to prepare Comprehensive Physical Development Plan of Kathmandu Valley.
- Map and keep track of various institutional activities, plans and programs of various institutions related with the development of Kathmandu Valley.
- Create and develop Thematic Working Groups (WGs) to develop and undertake various cross-cutting researches, plans and programs of KVDA
- Create and develop advisory groups as required and integrate the advices solicited into the researches, development of plans and programs of KVDA.
- Integrate partnership models and private-sectors' initiatives, ownerships, participation in the overall development plans of KV development.
- Develop plans and programs that enhance Public-Private Academia partnership for research, program development and effective implementation of the same.
- Conduct impact study of various programs and executions carried by KVDA and related agencies on overall wellbeing and related factors of the population residing there.
- Carry out feasibility study of various plans, programs, developments, executions and systems under consideration for the overall development of KV.
- Develop plans and programs to enhance standards of basic needs of utilities supply system through participatory approach of households and private sectors.
- Review the status of plans and programs periodically, expedite their executions and form reports for feedback on the status of plans and programs for regular update and review.
- Establish a Learning, Innovation and Application Center as a common platform for learning, experience sharing and information dissemination related to the development of Kathmandu Valley
- Establish a specialized Geographical Information System and Information Communication Technology (GIS-ICT) Section/Unit to develop comprehensive spatial information system, to support for spatial planning and informed decision making for KV.
- Establish KV-Integrated Information Center (Data Center)

Functional Responsibilities of Division of Policies and Regulations would include but not be limited to the following:

- Develop regulations, standards, guidelines and monitoring mechanisms for the utilities and related infrastructure's quality, protection of its sources, its sustainable use, treatments, maintenance and strengthening its supply system through participatory approach.

- Develop and formulate urban standards and regulations, guidelines, review existing bye laws, acts and regulations as per the spirit of guiding principles of KVDA
- Develop and formulate specific policies, regulations, guidelines in relation to Kathmandu Valley
- Prepare and validate the “Colored Development Zones” based on the availability of land considering development constraints, multi-hazard risk sensitivity, carrying capacity and future projection for year 2035 and enforce Risk Sensitive Land Use Plan on its basis in congruency with related policies and regulations.
- Monitor the compliance of the present rules, regulations, policies, standards and acts in relation to the overall development of the KV and provide feedback for its better implementation, review and periodic update.
- Issue permits for the execution of various Land Use, tax based incentives/disincentives mechanism as a base for land use plan implementation, demarcation of urban and agricultural land, land fragmentation, minimum plot size, building design and codes, permit processes, land development, subsidies in land pooling, subsidized credit for planned urbanization, land valuation, land prices, infrastructure standards, threshold for land use control, development and use of urban infrastructure and services, integrated urban services centers (IUCS), use of utility systems etc. as per the related plans, programs, policies and regulations.
- Review the status of policies and regulations formulated by KVDA and various government agencies and collaborators in relation to the comprehensive development plan of KV periodically, expedite their executions and form reports for feedback on the status of policies and regulations for regular update and review of the same.
- Check and investigate on the compliance of the regulations and standards within Kathmandu Valley and take/implement corrective action in the field.

Functional Responsibilities of Division of Development and Execution would include but not be limited to the following:

- Execute all the plans and programs of KVDA at the field level in close co-ordination with the related and responsible collaborative agencies.
- Prepare, collect and develop necessary information database of urban infrastructure and land information system of Kathmandu Valley.
- Carry out the plans and programs formulated by KVDA in close co-ordination with the related stakeholders and collaborative partners.
- Develop digital addressing system for all municipalities, VDCs and related organizations.
- Execute the development of new urban structures within Kathmandu Valley as envisioned by SDMP (2015-2035) in accordance with the specific land use zoning and building bye laws.
- Prepare capacity building plans and programs with participatory approach for institutions and related stakeholders.

Functional Responsibilities of Division of Organizational Management would include but not be limited to the following:

- Develop monitoring and evaluation mechanism to assess the level of co-ordination among various functions of the related divisions and collaborative partners.
- Create functional policies and manuals of operating procedures for various divisions and departments.
- Conduct all the administrative and human resource management functions.
- Manage finance and accounts functions.

- Render effective legal assistance in the preparation of legal opinions, studies, reports and correspondence, as required by various divisions.
- Ensure the provisioning of appropriate legal advice on a diverse range of substantive and procedural questions of law arising in administrative functioning.
- Supervise and oversee the review, negotiation and drafting of major contracts, tender documents and other legal documents, as required by the divisions.
- Supervising legal research and analysis, identifying important issues and apprising the operational departments of emerging legal trends from court decision and tendering advice to avoid unnecessary litigation, etc.
- Serving on various Standing Boards, Committees and task force, as required, to take care of legal information in framing of policies.
- Monitor the performance of panel lawyers and advise on formation of new panels.
- Assign court cases to panel lawyers while considering the nature and importance of the cases.
- Advise in the matter of preferring of appeals in superior courts and in the matter of taking recourse to other legal remedies.
- Assist the divisions of KVDA to respond to legal notices received.
- Manage human resource functions

Functional Responsibilities of Department of Disaster Risk Management Services would include but not be limited to the following:

- Conduct hazard, risk assessments and all other preparatory analysis works and along with evaluation on the lives of people, infrastructures and the buildings due to disasters and hazards and thus disaster risk management plans.
- Implement pilot activities of the various plans and programs designed for the safety of lives, infrastructures and life-based systems within Kathmandu valley.
- Provide capacity building programs to generate workforce for disaster mitigation and demolition
- Coordinate with major stakeholders and technical experts to provide Disaster Management Services in case of emergency
- Develop a team of experts to address disaster management needs and for building demolition
- Coordinate with related organizations to meet emergency purchasing/rental needs.
- Advise and provide technical resources on disaster risk management services.
- Develop building demolition activity as an integral part of the Disaster Management Services that provides safety, security, documentation, legislation, destruction of the structure, segregation and recycling the debris, proper transportation, proper disposal and proper platform for reconstruction at the site.
- Explore/study and analyze the practices applied for building demolition in similar environment in other countries to prepare building demolition guidelines
- Prepare disaster risk management guidelines for 4 primary phases: preparation, mitigation, response, and recovery; and

Functional Responsibilities of Department of GIS-ICT Services would include but not be limited to the following:

- Develop, regular update and disseminate GIS based information of KV pertaining to various themes (in compliance/accordance with Integrated Urban Information System and Local Level Spatial Data Infrastructure)
- Analyze data, develop models, prepare maps and decision support system tools for informed decision making in all levels of KVDA
- Develop ICT tools (such as web-portal, mobile application etc.) and mechanisms for encouraging and enabling participatory planning to the stakeholders and civil society.
- Undertake research and development to initiate “Smart City” concept in KV in collaboration with other KV departments, related GoN entities, private sector and international initiatives.

Functional Responsibilities of Department of Land Use Services would include but not be limited to the following:

- With the support of GIS-ICT Department, develop cadastral level multi-purpose land use information in collaboration with Dept. of Survey and Dept. of Land Information and Archive
- Undertake land use zonings based on the RSLUP colour zones and National Land Use Policy 2072.
- Develop comprehensive mechanism and implementation framework in coordination with Communication and Outreach Department for sensitization and education of RSLUP through public dialogue and public forums to facilitate implementation of RSLUP zoning at the land parcel level.
- Coordination and collaborations with multi-stakeholders and civil society for implementing participatory land use zonings at the land parcel level.
- Develop and pilot various mechanisms and modality under RSLUP implementation tools to support RSLUP land use zoning at land parcel levels.

Functional Responsibilities of Department of Climate Change and Urban Resilience would include but not be limited to the following:

- Support in planning disaster and climate resilient urban infrastructures.
- Develop KV and municipal level urban strategies to build societies’ and communities’ resilience to the effects of disaster and climate change
- Support and coordinate with development authorities and line agencies to integrate disaster and climate resilient mechanisms in the physical development of KV
- Develop and implement programs to enhance the capacities of stakeholders for disaster and climate resilience
- Coordinate and collaborate with national, international and development partners to enhance the resilience of KV towards disaster and climate change

Annex 4. List of identified projects through stakeholders' meetings

Following is the list of the projects that have been collected through various discussions and consultation meetings.

Strategy 1: Planning to be done at two Levels: Macro (Valley Level) and Micro (Municipal Level)

1. Construction of L-I-A Center
2. Land Bank Establishment
3. Study of carrying capacity of the Valley (KV limit to growth)
4. Earthquake resistant green cities (Satellite Town constructions)
5. Analysis of land management as per land economy policy
6. Study on private land development projects

Strategy 2: Prepare Constraints and sensitivity based zoning and Land use plan to guide urban expansion and Risk Sensitive Land Use Plan of Kathmandu Valley

1. Preparation of Planning Bye-laws
2. Preparation of guidelines for Land Use Zoning
3. Study of carrying capacity of KV
4. Land Information System
5. Digital Address system for municipalities
6. Information on street names, direction, and area
7. Study on property value impact due to road widening
8. Construction of Utility Corridor
9. GIS mapping of urban roads of KV
10. Updating of Building Bye-laws
11. Updating of RSLUP as per JICA's study
12. Preparation of Land Development Guidelines
13. Feasibility study of Rental housing in KV

Strategy 3: Develop Urban Pressure and Risk Resilient Urban Infrastructure

Water Supply
1. Identify major water recharge areas in KV and develop legal provisions to protect them
2. Introduce mandatory provision for rainwater harvesting at public, household and community level
3. Speed up the process of improving Bulk Distribution System and Distribution Network Improvement within the year 2020.
4. Strengthen Non-Revenue Water management to control water leakages and illegal connections and improve the revenue and return on investment for KV water utilities.
5. Develop and implement stringent policies to prohibit excessive ground water extraction
6. Plan and build community water storage for emergency purposes
7. Upgrade the existing Sewage Treatment Plants to treat sewage before disseminating into river
8. Build Community Based Waste Water Treatment Plant along major rivers in KV, such as Kathmandu Valley Waste water Management project
9. Promote and develop incentives to install waste water treatment system in institutional buildings

Annex 4. List of identified projects through stakeholders' meetings

(for example : Tokha Satya Sai Shiksha Sadan)
10. Develop regulations to prohibit direct flow of agricultural and industrial wastes into river
11. Develop incentive mechanisms to promote decentralized waste water treatment System (DEWATS) before discharging into rivers and streams
12. Land Area management for Water Treatment Plants, Sewage Treatment Plants and DEWATS
Solid Waste Management
13. Develop policies to practice waste segregation at Household level
14. Regulate solid waste collection and management through public- private partnership
15. Build model waste management plant that operates under the model of Reduce-Reuse-Recycle and includes areas for Household composting and material recycling
16. Coordinate with the SWMRTC, municipalities and concerned stakeholders on the sustainable management of solid waste in Kathmandu Valley to regulate and upgrade the current practices of solid waste collection and management
17. Construct Sanitary landfill site to be constructed for the municipality or cluster of municipalities
18. Awareness campaigns to promote waste segregation
19. Land Management for Sanitary Landfill Sites
Road Network
20. Prepare Kathmandu Valley Urban Road Standard, Urban Road safety management system, natural hazards and climate change risk standard
21. Road network planning considering disable friendly regulations
22. Preparation of Street Beautification Guidelines
23. Develop pilot project for utility corridor in urban road easements
24. Implementation Study of Restructured Bus Routes (follow up actions from KSUTP)
25. Study of multi-dimensional effects due to road widening in KV
26. Development of Integrated Green Surface Parking Lots on the banks of Rudramati
27. Implementation of pilot routes along selected key corridors (follow up actions from KSUTP)
28. Completion of Inner Ring Road
29. Feasibility of constructing utility and services ducts and renting out spaces within it to utility and service providers for cost recovery or profit basis
30. Regular maintenance of existing road networks
Transport and Traffic Management
31. Introduction of Prepare Kathmandu Valley Urban Transport Master Plan and Local Area Plans for Transport Management
32. Introduction and Maintenance of traffic signals for pedestrian crossings in main roads
33. Traffic Diversion from Core Historic City Area
34. Periodic monitoring of land use and transportation interface
35. Elimination of direct Entry to premises from the main roads and Highways
36. Improvement of accessibility to all wards and main areas
37. Build Overhead Bridge, Subways, Bus Bay and Taxi Stands at strategic locations
38. Traffic Light System Installation
39. Installation of Bicycle Stands (with 50 bicycle at each stand)

Annex 4. List of identified projects through stakeholders' meetings

40. Installation of Solar Lights in Bus Stands																												
41. Construction of Exclusive Pedestrian Path and Cycle Track on widened roads																												
42. Pilot run of electric bus service (hop in hop out) along two Historic City Routes (HC1 and HC2 as identified by KSUTP) as a part of the Project on Pedestrianisation of Historic City Corte																												
43. Feasibility Study of hop in hop out bus services along Inner Ring Road																												
44. Impact on Accessibility resulting from the implementation of BRT along two selected cross town corridors (four radial corridors)																												
45. Study of Mass Rapid Transit System Options																												
46. Expansion of Tribhuvan International Airport																												
47. Study of Bike and Ride, Park and Ride Facilities at strategic bus stops along Inner Ring Road																												
48. Cordon Survey and Parking Demand Estimate along Inner Ring Road and Middle Ring Road as a first step to undertake Peak Hour Pricing or cordon pricing to discourage motorised vehicles under different PT scenarios																												
49. Development of Parking Strategy and Policy and Trial of Installing Parking Meters or Parking Marshalls																												
50. Maintenance and activation of non-operational traffic lights at 13 major road junctions in the KV - Keshar Mahal - Putalisadak - Kalimati - New Baneshwore - Koteswore - Durbar Marg - Maitighar - Gaushala - Padmodaya Mod - Singhadurbar - Thapathali - Tinkune - Kaushaltar																												
51. Regular maintenance of operational traffic lights at 6 junctions within the Kathmandu Valley - Sallaghari Chowk - Jadibuti Chowk - Thimi Chowk - Gatthaghar Chowk - Munibhairav - Suryabinayak Chowk																												
52. Regular Maintenance and regulation of 9 non-operational pedestrian crossing light • Trichandra Campus area • In front of Baghdurbar • In front of Alka Hospital • Old Buspark • Bhotebahal Chowk • Shankardev Campus area • Kalimati • Newroad • Singhadurbar chowk																												
53. Installation of traffic lights in 17 major road junctions <table style="width: 100%; border: none;"> <tr> <td style="text-align: center;"><u>Kathmandu</u></td> <td></td> <td style="text-align: center;"><u>Lalitpur</u></td> <td style="text-align: center;"><u>Bhaktapur</u></td> </tr> <tr> <td>• Narayan Gopal Chowk</td> <td>• Balkhu</td> <td>• Satdobato</td> <td>• Thimi</td> </tr> <tr> <td>• Chabahil</td> <td>• Babarmahal</td> <td>• Pulchowk</td> <td></td> </tr> <tr> <td>• Old Baneshwore</td> <td>• Tripureshwore</td> <td>• Gwarko Chowk</td> <td></td> </tr> <tr> <td>• New Buspark</td> <td>• Krishna Pauroti</td> <td>• Jawalakhel</td> <td></td> </tr> <tr> <td>• Kalanki</td> <td>• Lainchaur</td> <td>• Lagankhel</td> <td></td> </tr> <tr> <td></td> <td>• Balaju</td> <td></td> <td></td> </tr> </table>	<u>Kathmandu</u>		<u>Lalitpur</u>	<u>Bhaktapur</u>	• Narayan Gopal Chowk	• Balkhu	• Satdobato	• Thimi	• Chabahil	• Babarmahal	• Pulchowk		• Old Baneshwore	• Tripureshwore	• Gwarko Chowk		• New Buspark	• Krishna Pauroti	• Jawalakhel		• Kalanki	• Lainchaur	• Lagankhel			• Balaju		
<u>Kathmandu</u>		<u>Lalitpur</u>	<u>Bhaktapur</u>

• Old Baneshwore	• Tripureshwore	• Gwarko Chowk																										
• New Buspark	• Krishna Pauroti	• Jawalakhel																										
• Kalanki	• Lainchaur	• Lagankhel																										
	• Balaju																											
Housing																												
54. Develop and implement plans for slum and squatter resettlement and implementation of plans similar to the Ichangu Narayan Land Pooling Project under 'Urban Poor Housing Program'																												
55. Review, update and monitor group housing standards.																												
56. Provide incentives mechanisms (such as density bonuses or property tax breaks) for private sector projects in the Yellow and Green Zones, which include low-income housing.																												
57. Develop regulatory framework mainly for rental services																												
58. Develop incentive policies for rental control																												

Annex 4. List of identified projects through stakeholders' meetings

59. Facilitate a community based assessment of current buildings (could be used to inform KV broader risk assessment).
60. Introduce awareness campaigns to promote further the consideration of para-seismic measures in the design and construction of new housing
61. Prohibit vertical division of buildings mainly in city core area and develop incentive mechanism to encourage House Pooling Concept
Strategy 4: Develop Environmental Friendly and Resilient Planning Approach
Planning
1. Prepare and Implement Kathmandu Valley Disaster Risk Management Plan
2. Preparation of vision plan for redevelopment of urban areas of KV
3. Introduction of property rights for access to natural resources as sunlight, air, Himalayan View, landscape.
4. Establish topographical database of KV in GIS
5. Identification and Removal of Dangerous Buildings and Structures (due to any kind of disaster)
6. Introduce Peer Review of Building Design, Permit Process and compliance with Building Codes
7. Elimination of Haphazard Hoarding Boards Display / Associated Traffic Accidents and Disasters
8. PPP for operation and management of
a) Open parks
b) Ponds/ water bodies
c) O/H road crossings
d) Organic waste recycling
Urban Forest
9. Prepare Guidelines for the Selection of appropriate tree species for scientific plantation to ensure that the tree species are best suited for the specific urban areas
10. Designate special forest areas and conduct a feasibility study to set up a “payment for ecosystem services” program (PES). Explore options through the PES program to compensate landowners for preserving the special forest areas and setting up a pilot cash incentive program to encourage local community management of forested areas. Consider levying special tax on urbanizing areas to support the PES program.
11. Manage the existing protected forests (eg.Shivapuri National Park) along with Community and religious forests to promote eco-tourism
12. Conduct tree and shrubs plantation campaigns; promote their maintenance through Corporate Social Responsibility
13. Conduct regular maintenance of existing urban forestry and timely removal of hazardous trees that are threat to human safety
14. Develop guidelines for the selection of appropriate tree and shrub species for scientific plantation to ensure that the tree species are best suited for the specific urban areas
15. Introduce regulatory provisions to include greenbelts as integral part of road network planning and river bank management
Pollution – Land, Water, Air, Visual
16. Relocate heavy polluting industries from the core residential areas of KV
17. Preparation and implementation of guidelines for activities and usage of “Polluters pay” collection tax

Annex 4. List of identified projects through stakeholders' meetings

18. Elimination of heavily polluting Cottage and other industries in the urban areas
19. PM _{2.5} and PM ₁₀ (Monitor and survey) Real time data access
20. Identification of debris disposal areas
21. Community based Waste Banking
22. Maintenance of Urban road surface
23. Study on Solid waste management in private level
24. Community Based Waste Water Treatment Plant along major rivers
25. Elimination of overhead wires, cables in the main streets
Parks and Open Space
26. Undertake a gap assessment to determine availability, connectivity and shortages of open spaces across the valley, particularly from a perspective of providing emergency evacuation spaces during hazard events, ecological benefits such as storm water detention areas, as well as public health benefits and further prepare open space plan, strategies, programs, cost and funding mechanism to increase open space
27. Identify land areas to build and manage urban parks, entertainment and socializing spaces at neighborhood level
28. Prepare Open Space Atlas
29. Overlaying of Open Space Atlas database on to cadastral maps of KV
30. Develop open space standards for Kathmandu Valley
31. Development of Animal Rescue Center and Central Zoo in Bhaktapur area
32. Conduct Greenery enhancement programs along the river banks [Manmohan Park, BP Park, Martyrs Memorial Park]
Water Bodies Management
33. Monitor and survey of water quality in water bodies within KV
34. River corridor project (along Bishnumati, Sangle Khola, Mahadev Khola, Nakkhu Khola and Karmanasha Khola)
35. Develop regulations to prohibit direct flow of agricultural and industrial wastes into river
36. Develop incentive mechanisms to promote decentralized waste water treatment System (DEWATS) before discharging into rivers and streams
37. Upgrade the existing Sewage Treatment Plants
38. Develop Integrated River Bank Beautification and Management Plan
39. Coordinate and compliment planning with HPCIDBC for the improvement of Bagmati and Vishnumati River Basin
40. Identify and develop plans to conserve traditional water systems, ponds, wetlands and other groundwater recharge areas
41. Work with local community groups to restore and manage traditional water systems, ponds, wetlands and other groundwater recharge areas
42. Conduct River Cleaning Campaigns in collaboration with public and private organizations
Energy Efficiency
43. Land management for large-scale solar farm
44. Advocate for urban centre focused hydropower project
45. Installation and maintenance of solar lights in the strategic urban roads
46. Introduction of net-metering, bilateral connection that allows people to buy and sell electricity

Annex 4. List of identified projects through stakeholders' meetings

47. Develop programs and incentive mechanisms to promote installation of renewable energy sources in urban households
48. Conduct awareness and Training programs to educate and involve people in environment friendly development activities (Eg. Urban forestry, open space management, Pollution control etc.)
Strategy 5: Promote Urban Regeneration of Historic City Core
1. Historic Settlement Redevelopment Projects
2. Pedestrianization of the historic core areas
3. Implementation of urban regeneration pilot project
4. Conservation of world heritage site surroundings (Study and Implementation)
Strategy 6: Promotion of Tourism and Service related industries
1. Urban Haat Bazar (weekly market)
2. Development of Tourist Routes
3. Land Banking for Recreational Parks
4. International Sculpture Park
5. Kathmandu Valley Cultural and Development Museum
Strategy 7: Promotion of Gender Equity and Social Inclusion
Organization of Retail Vegetable Market at 10 different places
Proper provision for Street vendors, workshops, and repair shops
Establishment of Auto-village
Study on legal management of informal markets in KV (vegetable markets/ fruits markets etc.)
Strategy 8: Encourage Safety and Security in urban development
Develop security circuit within the KV with surveillance for people and traffic at KV entry points
Digital Hub for inter-agency data sharing
House - metric blocking system
Application of Geographic information system for local organizations, community analysis, public administration and economic development.
Establishment of Urban safety units – latest techniques to evaluate crime prevention projects, including but not limited to locating hot-spot areas of urban crime, determining safe routes
Relocate polluting industries to lessen health and safety risks
Establish sport and recreation centers to promote youth involvement in positive measures
Establish Transit House within Police Stations
Establish child care centers and Old age homes at neighborhood/ city level
Develop and implement Urban Roads Standard for Kathmandu Valley
Develop standards for requirement of security personnel and related infrastructures (Police station, correction facilities)
Strict planning permits for skyscrapers and parking provisions, commercial spaces
Conduct awareness programs that focus on community policing: siren system + mechanism to connect to police
Strategy 9: Promote Private Sector Involvement in urban development activities
Identify and publish long list of projects where private sector can participate
Develop policies to facilitate private sector involvement in urban development activities
Few examples of such model would be: <ul style="list-style-type: none"> ▪ Multi Storied Car Park at the Central Business Districts ▪ Urban Re-generation of City Core areas ▪ Management and Operate Public Bus Terminals, Airports

- | | |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> ▪ Utility Management <ul style="list-style-type: none"> ○ Water Supply ○ Solid Waste Management
 ▪ Maintenance of Urban Roads ▪ Operate and Maintain Public Transportation including <ul style="list-style-type: none"> ○ Buses ○ Taxis ○ Monorails ▪ Build Smart Cities ▪ Construct and manage convention centers/ exhibition centers ▪ Participate in heritage conservation and maintenance ▪ Conservation of Culture, Music and Arts etc. | <ul style="list-style-type: none"> ○ Telecommunication ○ Electricity
 ○ Cable Car ○ Trams ○ Metro System ○ Mass Rapid Transit System ○ Flyovers and Interchanges |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Strategy 10: Emphasize on Information, Communication and Advocacy

- | |
|----------------------------------------------------------------------------------------|
| 1. Media Mobilization for Awareness |
| 2. Construction of Kathmandu Valley L-I-A (Learning – Innovation – Application) Center |
| 3. Public Consultation Workshops on KV's development |
| 4. Kathmandu Valley Library |
| 5. Regional Seminar of South Asia's Urban Development Authorities |
| 6. Study and revision of regulatory regimes and acts related to KV's development |

Strategy 11: Youth Mobilization and Participation in Urban decision making processes and development activities

- | |
|-----------------------------------------------------------------------------|
| 1. Training programs and campaigns for youth on emergency disaster response |
| 2. Leadership development programs |

Annex 5. LIST OF CONSULTATIVE MEETINGS FOR SDMP 2015-2035

Interaction program held for Long term Development Plan and 20 years strategic development master plan(2015-2035)

Date	Program	Venue	No. of Participants
15 July, 2012	Interaction Program on Long Term Development Concept of Kathmandu Valley	Covered Venue ¹	26
24 Feb, 2014	Interaction Program on Long Term Development Concept of Kathmandu Valley	Covered Venue	24
7 Jan, 2014	Interaction with CA Members	Covered Venue	77
19 Jan, 2014	Updating Long Term Development Concept Plan	Covered Venue	50
15 March, 2015	Interaction Program with CA Members	Covered Venue	67
30 March, 2014	Interaction Program to Update Long Term Development Concept Plan	Covered Venue	30
20 April, 2014	Interaction Program to Update Long Term Development Concept Plan	Covered Venue	23
28 April, 2014	KVDA Day Celebration - 3rd Anniversary Day and Discussion on SDMP	Covered Venue	87
20 June, 2014	Interaction Program for Vision for Kathmandu Valley	Covered Venue	38
2 June , 2015	Interaction Program with Journalist	Nepal Press Institute	45

Meetings held for Kathmandu Urban Transport Master Plan

Meeting	Date	Program	Venue	No. of Participants
SC²	15th August,2014	Presentation of the Inception Report	KVDA	14
WG1³	14th November, 2014	Outline of KUTMP Study	KVDA	12
WG1	15th November, 2014	Protection of Forest, Agricultural Land, River Bank Allocation of Urban Function	KVDA	18
CWG⁴	19th November, 2014	Major findings in phase1 (land use and urban development)	MOPIT	28
CWG	20th November, 2014	Major findings in phase1 (Trasport)	MOPIT	28
WG1 WG2⁵	21st November, 2014	Basic policy for land use and urban development Population distribution with Population density	KVDA	17
CWG	24th November, 2014	-Precondition for Discussion	MOPIT	

¹ Venue with full facility (multimedia, workshop setting)

² Steering Committee

³ Working Group 1(Land and Urban Development)

⁴ Collective Working Group

⁵ Working Group2(Transport)

Meeting	Date	Program	Venue	No. of Participants

CM	10th April 2015	Consultation With stakeholders	Nayapati, Gokarneshwor Municipality	25

⁷ Consultative Meeting

Annex 6. Review of SDMP by World Bank Team

Thank you for inviting us to review the Strategic Development Master Plan, 2015-35 (SDMP) for Kathmandu Valley. We would like to congratulate the KVDA for the SDMP that covers a lot of ground, land use, urban regeneration, environment, tourism, resilience. The document paints a clear description of the issues and challenges, which have extensively incorporated many studies done already. We also understood the document was prepared purely by the local team's efforts and initiatives led by the KVDA, and would like to congratulate on spearheading the important efforts and demonstrating leadership from the KVDA on this critical agenda. Our comments will more focus on the high-level strategic relevance, implementation of the Plan. We hope you find the comments useful in finalizing the document.

Executive summary. The executive summary could be better organized to bring about a balance between background information, and strategies and actions. The bulk of background and process information could be synthesized one or two paragraphs, with the remaining part of the Executive Summary focusing on the vision (may include expected outcome of the SDMP) and key strategies, which are the most important content for the SDMP.

Vision and strategies. The vision could benefit from further revision to become more succinct, describing the clear and inspirational desired change resulting from implementation of the SDMP. A phrase, "by enhancing the interdependence of nature, society and culture" is a bit distracting in the vision and rather means to realize the vision. It may be, for instance, changed to "Making the Kathmandu Valley as the most livable, prosperous, attractive city in Asia", which can relate to the goals such as safe and clean (livable), elegant, beautiful (attractive). It may add "resilient" in the vision and goals as resilience is major part of the strategies delineated in the SDMP. We also would like to highlight the importance of 'implementation' aspects: the strategies are of course the right and first step towards implementation but the devil is really in the details of the implementation

Timeframe and implementation. A 20-year timeframe (2015-2035) is actually short and this actually requires a pretty detailed master plan and implementation mechanisms. The document points to several priority actions and action plans and those seem to be steering in the right direction, however, it is not clear that the specific implementation actions and they are mostly at a "strategic level". The key would be how these actions are implemented on the ground. One consideration is for KVDA is to think this as a longer-term say 30-50 years since the document remains at a concept plan level.

Key planning parameters. Ideally, a master plan would go down to the scale and details (e.g. parcel level zoning and neighborhood plans). Perhaps for the future thinking, the KVDA particularly needs more clearly-defined land use maps to guide spatial development to promote a compact city and preserve agricultural land described in the SDMP. For example, while new areas located near transport nodes foster high density commercial activities and residential housing, other areas preserve the intimate nature of historical buildings for adaptive reuse. Where the central business district sees demand for taller office towers, care is taken to create open spaces and parks. Key components of a master plan must include planning parameters – such as allowable built up floor areas, types of land use, parcellation, infrastructure reserves, protected zones etc. While the current master plan has the big parameters in place, such as population growth, overall broad structure of the city etc. which is good, in the future, the KVDA should consider, in the future, developing real details at the granular level or proposal on how population and jobs are planned to be distributed and what infrastructure is required spatially on a plan. It will need more detailed design guidelines (parcels, building - height, materials, elements, public spaces, infrastructure, etc.). Urban design and public spaces are critical to achieve the vision of the SDMP in terms of economic prosperity, livability, resilience, attractiveness of

the KV. The Bank will be supportive on preparing, for example, the urban design policy framework, KV public space strategy and specific design guidelines.

Institutional arrangements. Leading/supporting agencies for action plans are clearly defined.

However, it needs to be careful about what would be realistic to implement the plans based on current (or near future) capacity of responsible agencies. It seems that the KVDA and municipalities are responsible for most of the action plans. It may need a following-up plan for institutional capacity building, especially by working closely with MoFALD. In addition, it is good to be extensive in the scope of the action plans. The plans should be more implementation oriented, not just be the plans to plan, must be the plans to implement to avoid ending up producing many other paper plans. We recommend KVDA think through prioritize specific action plans with clearer timeframe within 20 years of implementation. (i.g. short term 5year, 10year, 20years etc.), which can also be reviewed every 5 years. It will make the SDMP more realistic and feasible.

Financing. From experiences from developed countries, one of the purpose of a Master Plan is to give investors/developers the confidence that he is entitled to build on a certain location at a plot ratio of a certain use. In this sense, the current plan may be still at a higher level document, as opposed to firm plans for developers to be able to come in and invest. With this said, this strategic document provides excellent starting point for the KVDA to further develop financing plan from both private and public sectors.

In the Chapter 1, it would be great to add a key map in Figure 1.3 (p2), showing a geographical location of KV in Nepal. In the Chapter 2, it would be logical to bring the National Urban Development Strategy to put the SDMP in the context of the national development and enhance the integrity with other parts of the country. Some of important sectoral maps in the document are not easy to read and need higher resolution.

I wish you the best luck in finalizing the report and look forward to discussing further.

Review of SDMP by Oscar Carracedo, Asst. Prof., MSc Urban Planning & Design, M.Arch, Singapore

It was a real pleasure to meet you at the EGM, at it has been a real pleasure to go through the SDMP. Let me first congratulate you for the impressive work done.

I personally think that the document is a very good example of strategic planning that achieves to incorporate all the relevant aspects of the territory. It is quite hard for me to add new things to the document without being too naive and of course I will need more time to analyze it and to learn the specificities of the territory. Differences aside, the reading of the document has shown me some similarities to the Singaporean future scenarios that are now under study. Singapore has pretty much the same area and is dealing a 2030 scenario of 6.9 M inhabitants, which means a similar population to the one that your document is estating for KV. In that future scenario for KV, the question of density will be crucial, similarly to what Singapore is considering now.

Although my comments at this stage can only be very general I can say that the document constitutes a great base from where other levels of planning can start from. In this sense, and related to density, I personally think that it would be very important to analyze, study and propose specific urban models for urban development and redevelopment that tackles the issue of high density and high quality urban environments. In this sense, the role and incorporation of public spaces in the consolidated and high density areas constitutes an essential strategy towards a livable and sustainable city.

Moreover, the specific plans for infrastructures and the metabolism aspects of the city (water, energy, waste...) will become key aspects for the future sustainable development of KV.

I find specially interesting all the analysis done in order to determine the planning constraints. The final constraint map constitutes in this sense a document of immeasurable value which establishes a great base for future detailed and master planning. The proposal of resilient infrastructures and urban developments in front of the different risks that the valley faces is another of

Thank you very much Yogeshwar for letting me know this amazing work that you are doing, and let me offer my expertise and knowledge on urban planning, regeneration and development for any future consultancies you need for the development of the SDMP, it would be a real pleasure to participate in such an interesting and challenging plan. Please let me know how can I contribute as a consultant and of course let's think in partnership possibilities with the university.

One possibility that I can think off is using consultancies and agreements with our institution so that we can develop master plans, detailed planning or spatial plans for specific areas where you need to have more detailed information and proposals dealing with resilience, flooding, density, infrastructures, etc. These proposals can be developed in the frame of different studios or as professional consultancies.

Review of SDMP by UNISDR team

It was nice talking to you and thank you for taking the call at late hours.

Mr. Parajuli as discussed between you and Jerry, here are the next steps and follow up actions.

Areas of discussion:

- Kathmandu Valley Development Authority (KVDA) covers 21 municipalities some of which are prone to multiple hazards. While the elections are due for end 2015, there is no guarantee of that taking place and will depend on constitutional reforms. Most of these municipalities do not have enough capacity to implement current and new plans/strategies. Following the elections, new local leaders are expected to manage the implementation of “Kathmandu valley 20 Years Strategic Development Master Plan (2015-2035)” including the reconstruction plan- for which capacity building would be necessary.
- The new “Kathmandu Valley 20 Years Strategic Development Master Plan (2015-2035)” would be adopted in the next few months. To support its implementation (particularly the suggested strategies and actions) including the reconstruction plan, there is a need to conduct a capacity and priority assessment. Kathmandu City and few others had conducted their capacity assessment in 2013 (available at: <http://tinyurl.com/qbrbbvc>). New proposed assessments would be based on the global standards recently adopted and support the municipalities in identifying priority actions that would contribute to the master plan plus the reconstruction plan from a resilience and disaster risk reduction angle. further, since PDNA does not currently undertake in-depth investigative processes associated with failure analysis. These assessment would identify the causes of failure and support build-back-better planning efforts otherwise the end result will be to just build back.

ANNEX 7:

MONITORING AND EVALUATING FRAMEWORK OF ACTION PLANS

Kathmandu Valley Development Authority

Short Term Strategic Action Plan (3 Years: FY 2072/073 - 074/075)

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
Strategy 1: Planning to be done at two Levels: Macro (Valley Level) and Micro (Municipal Level)	Review and revise existing regulations, plans, tools and guidelines to implement SDMP 2015-2035	Preparation of Comprehensive Physical Development Plan Develop Kathmandu Valley Land Use Policy in consonance with the National Land Use Policy 2069 Review and revise the existing Building Bye laws; Introduce Peer Review of Building Design, Permit Process and compliance with Building Codes	KVDA MoLRM, MoUD KVDA	Partner agencies KVDA, Municipalities MoUD, Municipalities	Availability of Comprehensive Physical Development Plan Availability of Kathmandu Valley Land Use Policy Number of structures complying to building bye-laws and building codes
	Guide related line agencies/authorities for major land development, re-settlement plans in KV in compliance to eco-friendly standards	Impact study of land development and management mechanisms, Road widening Programs in KV (Analysis of livelihood change, rental status, Change in usage of buildings, Land use change) Feasibility study for land bank establishment Devise policies for Government subsidy in land pooling and subsidized interest from financial institution for planned urbanization	KVDA KVDA, MoUD	Partner agencies	Availability of study report Availability of study report Availability of policies
	KVDA to coordinate with local bodies for development and implementation of Local Level Development Plans in strict compliance to the Kathmandu RSLUP	Develop Land Valuation guidelines for KV Prepare Local Level Development Plans at the municipalities and VDCs level, based on the strategic development plan and urban development guidelines while coordinating with related organizations and experts.	MoLRM KVDA, Municipalities	KVDA, MoUD Development Partners	Availability of Land Valuation guidelines for KV Number of municipalities with local level development plans
	Strategy 2: Prepare Constraints and sensitivity based zoning and Land use plan to guide urban expansion and RSLUP of Kathmandu Valley	Develop and enforce "Colored Development Zones" based on the availability of land considering development constraints, multi-hazard risk assessment, carrying capacity and future projection for year 2035	Develop and enforce Risk Sensitive Land Use Plan on the basis of colored development zones and the National Land Use Policy 2069	KVDA,	Development Partners, MoUD, Municipalities
		Prepare detailed area plans, standards and guidelines for redevelopment of highly dense areas (and relocated sites) to introduce risk reduction measures such as wider roads (for emergency access), strengthened buildings, increased amount of multiple open spaces, and buildings that can serve as emergency shelters and critical lifelines during disaster events, and post-disaster recovery.	KVDA	MoHA, DoR, Municipalities	Number of emergency shelters

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
	Plan and promote decongestion in Red Zone	<p>Undertake upgrading programs in historic and low-income areas to provide improved infrastructure, safe shelters and open spaces, and realignment of streets to facilitate emergency access while maintaining heritage values and accessibility for low income groups.</p> <p>Develop incentives (such as property tax breaks and low-interest loans) to promote adoption of resilience measures for commercial / residential properties.</p> <p>Work with local agencies to streamline the redevelopment process for projects that include resilience measures.</p> <p>Revise zoning bylaws and prepare guidelines to upgrade urban density in existing built up areas and select target areas in the Yellow Zone.</p> <p>Prioritize infrastructure improvements to support increase in urban density and to promote development of target areas.</p> <p>Develop incentives (such as increased allowable density, tax credits and low interest loans) to promote a low income housing component in market rate housing development projects.</p> <p>Develop plans, programs and policies to amend Land pooling</p>	<p>KVDA, Municipalities</p> <p>MoHA, MoLRM</p> <p>KVDA, Local Agencies</p> <p>KVDA</p> <p>MoUD,</p> <p>MoUD</p>	<p>Partner agencies</p> <p>KVDA</p> <p>Municipalities, Development Partners</p> <p>KVDA, MoPIT</p> <p>KVDA, NLHDA, Banks, Financial Institution</p> <p>MoUD</p>	<p>Proportion of upgraded historic and low income areas</p> <p>Proportion of buildings with resilience measures</p> <p>Number of projects including resilience measures</p> <p>Area of Yellow zones with upgraded urban density</p> <p>Percentage of improved infrastructure</p> <p>Percentage of low income housing component in housing development projects</p> <p>Area and number of land pooling projects in south</p>
	Promote residential development and non-polluting industries only in selected areas of Yellow Zones	<p>Use existing information from the 2015 earthquake to characterize hazard, exposure and vulnerability to earthquake and inform a city wide risk profile.</p> <p>Identify and develop a series of structural and non-structural measures to address the priority risks.</p> <p>Develop Earthquake Risk Management Plan consolidating risk assessment, risk prioritization and possible measures.</p> <p>Implement pilot activities in the selected 2-3 municipalities</p>	<p>KVDA, MoUD, MoHA</p>	<p>Municipalities, I/NGOs</p>	<p>Availability of risk profile</p> <p>Availability of measures to address the priority risks</p> <p>Availability of Earthquake Risk Management Plan</p> <p>Number of pilot activities</p>
	Plan and promote organized housing and land pooling in designated Green Zone, and few high rise development in South	<p>Conduct Feasibility Studies to develop New Satellite cities in at least 3 areas of Kathmandu Valley</p>	<p>KVDA</p>		<p>Availability of Feasibility studies</p>

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
Strategy 3: Develop Urban Pressure and Risk Resilient Urban Infrastructure	Develop Urban Infrastructure Standards	Standardize drawings and monitoring guidelines for urban infrastructures, considering natural disaster and climate change risk in current maintenance regime for public infrastructure. Develop a standard approach to undertake site selection for new urban infrastructure to promote development in lower hazard areas while meeting Level of Service requirements.	KVDA	MoUD, Local Bodies and Relevant agencies	Percentage of improved infrastructure
	Undertake a disaster and climate change risk assessment for existing urban infrastructure	Develop and implement risk management measures with both public agencies and private companies.	KVDA, MoUD	MoUD, Relevant agencies	Percentage of new urban infrastructure following the standards
	Promote design and construction of climate change and disaster resilient urban infrastructures	Determine the desired 'level of hazard immunity' for new urban assets to be designed and built based on the criticality of assets and services provided. Promote the use of the standards (developed in Obj. 13) for both public and private assets through awareness campaign and training session for professionals of various industries (engineers, planner, architects, asset managers, etc.).	KVDA, MoUD, MoFALD	MoFALD, I/NGOs, Private Sectors, and relevant agencies	Number of projects with risk management measures
	Obj. 4. Enhance the capacities of local bodies to support societies and communities to develop coping capacities to Climate Change and Disaster Risk	Develop strategy to raise capital for infrastructure financing to address the backlogs in infrastructure and provision of services in KV. Develop and implement an awareness campaign based on the issues identified for KV and the strategies being promoted. Undertake a gap analysis of current professionals and practitioners in local bodies; develop a tailored training program based on existing capability and capacity and the identified gaps.	KVDA	Private Sectors, relevant agencies	Percentage of new urban assets and services following requirements
			KVDA	Local bodies	Percentage of trained professionals
			KVDA	Local bodies	Proportion of capital raised
			KVDA	Local bodies	Number of campaigns
			KVDA	Local bodies	Number of training programs
					Number of Water Recharge plans
					Number of houses with water supply from Bulk Distribution System
Strategy 3.1. Water Supply	Expedite water supply projects	Prepare and implement water recharge plans, adopt land use policies and revise byelaws to protect water recharge areas. KVDA will work with relevant agencies to speed up the process of improving Bulk Distribution System and Distribution Network Improvement within the year 2020	PID, KUKL	Municipalities, Relevant agencies, KVDA	Length of water supply network system with no leakage
	Strengthen water supply system	In coordination with relevant agencies, strengthen Non-Revenue Water management to control water leakages and illegal connections and improve the revenue and return on investment for KV water utilities.	PID, KUKL	Municipalities, Relevant agencies, KVDA	Length of water supply network system with no leakage

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
		Develop and implement stringent policies to prohibit excessive ground water extraction			Number of houses with ground water extraction system
Strategy 3.2. Waste Water Treatment	Obj. 2. Promote water treatment in institutional buildings	Promote and develop incentives to install waste water treatment system in institutional buildings (for example : Tokha, Satva Sai Shiksha Sadan)	KVDA	Relevant institutions	Number of institutional buildings with Waste Water Treatment System
Strategy 3.3. Solid Waste Management	Promote Integrated Solid waste Management	Prepare Solid Waste Management plan for Kathmandu Valley Develop local level plan for waste management for each municipality	SWMTSC	Municipalities, KVDA, Concerned Stakeholders	Availability of Solid Waste Management Plan for KV Number of municipalities with local level plan for waste management
	Debris Management	Develop a Services team to provide technical resources for debris management	KVDA	Municipalities	Establishment of services team
	Promote community based waste mgmt	Conduct awareness campaigns to promote Community based Waste Management	SWMTSC	Municipalities KVDA	Number of community based waste management projects
Strategy 3.4. Road		Prepare Kathmandu Valley Urban Road Standard, Urban Road safety management system, natural hazards and climate change risk standard (mostly in relation to drainage system and pavements).	KVDA	MoUD, MoFALD, MoPIT, DoR, relevant agencies	Availability of Urban road standards
	Develop Road Standards and Guidelines	Prepare Street Beautification Guidelines to include aesthetic considerations in large urban projects.	KVDA	MoUD, MoFALD	Number and length of streets following the guidelines
		Explore options to collocate utility corridor in urban road easements as a pilot project	KVDA	Relevant agencies	Length of urban roads with integrated utility corridor
		Construction of Exclusive Pedestrian Path and Cycle	DoR	KVDA, relevant	Length of exclusive pedestrian path and
Strategy 3.5. Transportation	Develop mechanism to address urban transport related issues	Prepare Kathmandu Valley Urban Transport Master Plan	KVDA, MoPIT, Municipalities and relevant agencies	DoTM, DoR, Development Partners	Availability of Kathmandu Valley Urban Transport Master Plan
		Review update and monitor group housing standards.	KVDA	Development Partners	Percentage of improved group housing
Strategy 3.6. Housing	Undertake urban upgrading and promote low-income housing in private housing projects	Prepare incentives (such as density bonuses or property tax breaks) for private sector projects in the Yellow and Green Zones, which include low-income housing	KVDA, MoUD		Percentage of involvement of private sector in housing projects
	Improve the consideration of paraseismic measures in the housing stock	Facilitate a community based assessment of current buildings (could be used to inform KV broader risk assessment). Introduce awareness campaigns to promote further the consideration of para-seismic measures in the design and construction of new housing	DUDBC	KVDA, MoUD	Percentage of information received
			DUDBC	KVDA, MoUD	Percentage of buildings with consideration of para-seismic measures

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
Strategy 4: Environmental Friendly and Disaster Resilient Planning Approach	Develop Kathmandu Valley Disaster Risk Management Plan	Prepare and Implement Kathmandu Valley Disaster Risk Management Plan	KVDA	MoHA, Development Partners	Availability of Kathmandu Valley Disaster Risk Management Plan
		Identify land areas to establish and management urban parks	KVDA, MoFSC	Municipalities, Local Communities	Area of land for urban parks
		Conduct tree and shrubs plantation campaigns; promote their maintenance through Corporate Social Responsibility	MoFSC	Private Sectors, KVDA, Municipalities	Area of plantation in public areas
	Promote Urban Forest areas	Develop guidelines for the selection of appropriate tree and shrub species for scientific plantation to ensure that the tree species are best suited for the specific urban areas	DoF, KVDA	Municipalities, Nurseries	Availability of guidelines and implementation
		Introduce regulatory provisions to include greenbelts as integral part of road network planning and river bank management	KVDA, NPC	Municipalities, DoF	Length of road with greenbelt
	Preserve and develop Open space	Prepare Open Space Atlas	KVDA	MoLRM, Dev Partners	Availability of Open Space Atlas
	Develop a partnership model for operation and management of Open spaces	Build parks, entertainment and socializing spaces at neighborhood level	KVDA	Municipalities, Local Communities	Number and area of parks
	Provide regulations and incentives for Land Pollution control	Relocate heavy polluting industries from the core residential areas of KV	MoUD, KVDA, Mol	CBO, Local Bodies, Industrial Sectors	Number of relocated industries
	Promote the usage of renewable energy sources in Kathmandu Valley	Installation and maintenance of solar lights in the strategic urban roads	KVDA, AEPCC	Municipalities, DoR, I/NGOs, Private sector	Length of urban roads with solar lights
	Strategy 5: Urban Regeneration of Historic City Core	Rejuvenating the core historic cities through the preservation of the	Develop plans to pedestrianise historic core areas	KVDA	MoTCA, DoA, Municipalities
Prohibit vertical subdivision of buildings in city core areas		Develop policy and bye laws to prohibit vertical division of buildings mainly in city core area	KVDA	NLHDA, RUPSON	Percentage of verticla division of buildings
Strategy 6: Promotion of Tourism and Service Related Industries	Promotion of tourism and allied services to create employment opportunities in several sectors	Identify, develop and maintain eco trail or cycle trail around the valley to foster the local economy and livelihood	KVDA, MoUD, DoR		Length of eco-cycle trail
	Devise social accountability mechanism	Develop platform for public hearing, and social audits	KVDA, Municipalities		Number of participants in social audits
Strategy 7: Promotion of Gender Equity and Social Inclusion	Recognize informal sector and give opportunity to their business in organized manner	Prepare development plans for organized retail vegetable markets at 10 different places in consultation with the local bodies	KVDA, Municipalities		Number of organized retail vegetable markets
		Feasibility study of Urban Haat Bazar (weekly market) along Ring Road and Koteshwor - Surya Binayak Highway	municipalities, Street Vendor association	KVDA,	Arrangement of weekly urban haat bazaar

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
Strategy 8: Promote Safety and Security in Urban Development	Strengthen Security system	Develop security circuit within the KV with surveillance for people and traffic at KV entry points	Metropolitan Police	KVDA, Line agencies, Municipalities	Number of security circuit in KV
	Recognize informal sector and give opportunity to their business in organized manner	Strict planning permits for skyscrapers and parking provisions, commercial spaces			Number of skyscrapers, parking provisions with planning permits
Strategy 9: Promote Private Sector Involvement in Urban Development Activities	Prepare Economic Vision for Kathmandu Valley 2035	Prepare a document that explores and sets out a vision for what the economy of Kathmandu Valley would look like within the year 2035 and beyond	KVDA, Private Sectors		Availability of Economic Vision for KV
	Promotion of Private sector involvement in development projects	Develop policies to facilitate private sector involvement in urban development activities	KVDA, Private Sectors	Line agencies	Percentage of private sector involvement in urban development activities
Strategy 10: Emphasize on Information, Communication and Advocacy		Raise awareness among key stakeholders, public and private sector about the role of KVDA in the sustainable development of Kathmandu Valley through media, civil societies and build up partnership to contribute to the cause.	KVDA	Media Partners	Number of partnerships with KVDA for KV's development
	Play a lead role in advocating for the implementation of the SDMP	Hold regular consultative meetings, workshops and seminars with concerned stakeholders to gain feedback on various action plans and projects for the development of KV.	KVDA	Other related agencies	Number of consultative meetings and percentage of participation
		Construct Learning-Innovation-Application Center to create platform and opportunity for sharing information and ideas within and outside KVDA, nationally and internationally to internalize and institutionalize knowledge.	KVDA	Other Collaborative Partners	Establishment of L-I-A center
Strategy 11: Youth Mobilization and Participation in Urban decision making processes and development activities	Include youth in design and planning processes	Involve youth in the design, planning or conceptualization of cities for innovative ideas on future cities which are inclusive and sustainable	KVDA, Municipalities	Academic Institutions, Professional society, Volunteers from IANIGOs	Number of youth participants in development activities

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
Strategy 3.2. Waste Water Treatment	Coordinate in development of Waste Water Treatment System	KVDA as a main coordinating agency would coordinate with various sectors working to build Community Based Waste Water Treatment Plant along major rivers in KV, such as Kathmandu Valley Waste water Management project	PID, HPCIDBC	Municipalities, KVDA	Number of Community Based Waste Water Treatment Plant
	Promote Integrated Solid waste Management	Construct Sanitary landfill site for the municipality or cluster of municipalities (> 50,000 population)	SWMTSC	Municipalities, KVDA	Number and area of Sanitary landfill sites
Strategy 3.3. Solid Waste Management	Manage medical waste	Allocate land areas for management of municipal solid waste, e-waste and medical waste	KVDA, MoEST, SWMTSC	Municipalities	Number and area of allocated lands as per waste type
	Manage e-waste	Introduce mechanisms to ensure the implementation of Waste management policy which requires all medical institutions and manufacturers to manage	DoHS, Municipalities / SWMTSC	KVDA, Medical Institutions and manufacturing	Number of medical institutions and manufacturers with self waste management system
		Establish 'Environment Research Center' to research on effective management of electronic waste and develop stringent policies to manage the same	SWMTSC, MoEST	KVDA, Municipalities	Establishment of 'Environment Research Center'
Strategy 3.4. Road	Develop Road Standards and Guidelines	Plan bike corridors, pedestrian paths/crossings, and dedicated bus lanes as part of roadway projects to provide safe options for alternate modes of travel	DoR	KVDA	Length of bike corridors, numbers of pedestrians paths and length of bus lanes
	Construction of Road Networks	Implement Disable friendly regulations	DoR	KVDA, relevant	Length of roads with disable friendly
		Continue Road widening projects as per the bye laws,	KVDA, DoR		Length of widened roads
Strategy 3.6. Housing	Undertake urban upgrading and promote low-income housing in private housing projects	Develop plans for slum and squatter resettlement and implementation of plans similar to the Ichangu Narayan Land Pooling Project under 'Urban Poor Housing Program'	KVDA, MoUD	MoCP, Development Partners	Number of projects under 'Urban Poor Housing Program'
	Promote environment friendly buildings	Develop standards for green buildings (that include aspects such as water conservation, and low energy use)	DUDBC, MoEST	KVDA	Number of buildings following green standards
Strategy 4: Environmental Friendly and Disaster Resilient Planning Approach		Designate special forest areas and conduct a feasibility study to set up a "payment for ecosystem services" program (PES). Explore options through the PES program to compensate landowners for preserving the special forest areas and creating up a pilot catch	KVDA	Municipalities, partner agencies, DoF	Area of special forest areas
	Promote Urban Forest areas	Conduct regular maintenance of existing urban forestry and timely removal of hazardous trees that are threat to human safety	DoR, DoF	Municipalities,	Management of urban forests
	Develop a partnership model for operation and management of Open spaces	Coordinate and compliment planning with HPCIDBC for the improvement of Bagmati and Vishnumati River Basin	HPCIDBC, KVDA	MFSC, DDC, Municipalities, Partner agencies	Length of managed river basin

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
	Develop a partnership based model for operation and management of ponds/water bodies	Identify and develop plans to conserve traditional water systems, ponds, wetlands and other groundwater recharge areas.	KVDA, Municipalities	Local Communities	Number of conservation projects of traditional water systems, ponds etc.
	Provide regulations and incentives for Air Pollution control	Work with local community groups to restore and manage traditional water systems, ponds, wetlands and other groundwater recharge areas.	Municipalities	Local CBO, Development Partners	Number of restored traditional water systems
	Provide regulations and incentives for Water Pollution control	Tax incentives to promote non-polluting vehicles and Mass Transit System	MoPIT	Private Sector	Percentage of vehicles following non polluting principles
	Provide regulations and incentives for Land Pollution control	Develop incentive mechanisms to promote decentralized waste water treatment System (DEWATS) before discharging into rivers and streams	Municipalities,	CBO, Local Bodies, Industrial Sectors	Percentage of DEWATS system developed
	Promote the usage of renewable energy sources in Kathmandu Valley	Develop Strict regulations to conserve agricultural areas in KV	MoUD, KVDA, MoLRM	Municipalities	Area of agricultural areas
		Land management for large-scale solar farm	KVDA, MoLRM	Municipalities, AEPC	Area of solar farm
Strategy 5: Urban Regeneration of Historic City Core	Rejuvenating the core historic cities through the preservation of the historical, cultural and social assets	Construction of bye-pass road around such sites	MoPIT	KVDA, DoR, Municipalities	Number of historic core areas with bye-pass road
	Support the Department of Archaeology to undertake immediate reconstruction of heritage areas	Develop projects on conservations and revitalization of historic core area	KVDA, Municipalities		Number of projects implemented on revitalization of historic core area
	Promotion of tourism and allied services to create employment opportunities in several sectors	Urban Regeneration of Heritage Core of Kathmandu Valley and old settlement	KVDA, Municipalities		Number of projects implemented on urban regeneration
Strategy 6: Promotion of Tourism and Service Related Industries		Partner with Department of Archaeology to improve cultural context of heritage areas as part of reconstruction efforts.	DoA	KVDA	Percentage of improved cultural heritage areas
		Identify, develop and maintain eco trail or cycle trail around the valley to foster the local economy and livelihood	KVDA, MoUD, DoR		Length of eco-cycle trail
Strategy 7: Promotion of Gender Equity and Social Inclusion	Recognize informal sector and give opportunity to their business in organized manner	Develop capacity building trainings for informal sector workers	KVDA, MoUD,	Municipalities, Development Partners	Percentage of trained informal sector workers
		Identify plans to develop markets for Street vendors, workshops, and repair shops on street	Street Vendor Association	KVDA, municipalities	Number of organized markets for street vendors, workshops and repair shops
Strategy 8: Promote Safety and Security in Urban Development	Strengthen Security system	Digital Hub for inter-agency data sharing	Metropolitan Police	KVDA, Line agencies, Municipalities	Availability of digital hub
		Application of Geographic information system for local organizations, community analysis, public administration and economic development.			Availability of GIS system

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
	Ensure crime reduction and promote safety	<p>Establish sport and recreation centers to promote youth involvement in positive measures</p> <p>Establish Transit House within Police Stations</p> <p>Establish child care centers and Old age homes at neighborhood/ city level</p>	KVDA, Municipalities	Private Sectors	<p>Number of sport and recreation centers</p> <p>Number of transit houses</p> <p>Number of child care centers and old age homes</p>
Strategy 9: Promote Private Sector Involvement in Urban Development Activities	Promotion of Private sector involvement in development projects	Identify development projects where private sector can participate and lead	KVDA, Private Sectors	Line agencies	Number of projects with PPP model
Strategy 10: Emphasize on Information, Communication and Advocacy	Play a lead role in advocating for the implementation of the SDMP	<p>Set up an information system, so as to act as an information centre as well as disseminate the information to the public with ease</p> <p>Apply for international affiliation as and when required</p>	KVDA	Other related agencies	<p>Establishment of information center</p> <p>Number of international affiliations</p>

Kathmandu Valley Development Authority

Long Term Strategic Action Plan (20 Years: FY 2082/083 - 091/092)

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
Strategy 2: Prepare Constraints and sensitivity based zoning and Land use plan to guide urban expansion and RSLUP of Kathmandu Valley	Develop and enforce "Colored Development Zones" based on the availability of land considering development constraints, multi-hazard risk assessment, carrying capacity and future projection for year 2035	Develop and support implementation of incentive and disincentive mechanisms to promote/ control development in land use zones within each color zones	KVDA	MoUD, Municipalities	Area of Controlled development
	Protect prime fertile agricultural lands	Explore various options successfully practiced in other metropolises to develop mechanisms to establish and support transfer of development rights (TDR) from agricultural lands to targeted urban areas.	KVDA	MoUD, MoLRM	Implementation of TDR
Strategy 3.2. Waste Water Treatment	Coordinate in development of Waste Water Treatment System	KVDA as a main coordinating agency would coordinate with various sectors working to build Community Based Waste Water Treatment Plant along major rivers in KV, such as Kathmandu Valley Waste water Management project	PID, HPCIDBC	Municipalities, KVDA	Number of Community Based Waste Water Treatment Plant
Strategy 4: Environmental Friendly and Disaster Resilient Planning Approach	Promote the usage of renewable energy sources in Kathmandu Valley	Advocate for urban centre focused hydropower project	DoED	KVDA	Implementation of urban centre focused hydropower project
		Develop programs and incentive mechanisms to promote installation of renewable energy sources in urban households	AEPC, DOED	KVDA,	Percentage of households with installed renewable energy source system
Strategy 6: Promotion of Tourism and Service Related Industries	Promotion of tourism and allied services to create employment opportunities in several sectors	Identify and develop potential Tourist areas to promote agro tourism and cultural tourism	KVDA, Municipalities	MoTCA, NTB	
		Promote development of tourism service infrastructures such as hotels, recreational centres, golf course, eco-parks	NTB, HAN	KVDA	Percentage and type of tourism services
		Designate land use zones to promote development of sports venues (football/cricket stadium, golf course) to support development of sports in the country as well as to attract sports tourism in the KV	KVDA, NTB, MoYS		Area of designated land use zones

Strategy	Objectives	Action Plans	Lead Agencies	Supporting Agencies	Indicators
Strategy 7: Promotion of Gender Equity and Social Inclusion	Recognize informal sector and give opportunity to their business in organized manner	Develop capacity building trainings for informal sector workers Identify plans to develop markets for Street vendors, workshops, and repair shops on street	KVDA, MoUD, Street Vendor Association	Municipalities Development Partners KVDA, municipalities	Percentage of trained informal sector workers Number of organized markets for street vendors, workshops and repair shops
	Strengthen Security system	Digital Hub for inter-agency data sharing	Metropolitan Police	KVDA, Line agencies, Municipalities	Availability of digital hub
Strategy 8: Promote Safety and Security in Urban Development		Application of Geographic information system for local organizations, community analysis, public administration and economic development.			Availability of GIS system
	Obj. 2. Ensure crime reduction and promote safety	Establish sport and recreation centers to promote youth involvement in positive measures		Private Sectors	Number of sport and recreation centers
		Establish Transit House within Police Stations			Number of transit houses
		Establish child care centers and Old age homes at neighborhood/ city level			Number of child care centers and old age homes
Strategy 9: Promote Private Sector Involvement in Urban Development Activities	Promotion of Private sector involvement in development projects	Identify development projects where private sector can participate and lead	KVDA, Private Sectors	Line agencies	Number of projects with PPP model
Strategy 10: Make focused use of Information, Communication and Advocacy	Play a lead role in advocating for the implementation of the SDMP	Set up an information system, so as to act as an information centre as well as disseminate the information to the public with ease	KVDA	Other related agencies	Establishment of information center
		Apply for international affiliation as and when required			KVDA
